The data given in this leaflet are offered in good faith. No liability can be accepted concerning technical data that are not directly covered by recognized international standards. FIP reserves the right to carry out any modification to the products shown in this leaflet.

Les données contenues dans cette brochure sont fournies en bonne foi. FIP n'assume aucune responsabilité pour les données qui ne dérivent pas directement des normes internationales. FIP garde le droit d'apporter toute modification aux produits présentés dans cette brochure.

Alle Daten dieser Druckschrift wurden nach bestem Wissen angegeben, jedoch besteht keine Verbindlichkeit, sofern sie nicht direkt internationalen Normen entnommen wurden. Die Änderung von Maßen oder Ausführungen bleibt FIP vorbehalten.

**Valvola a membrana  
compatta a comando  
pneumatico,  
NC / NO / DA**

Dimensioni secondo ISO-BS-ASTM

La CM/CP è una valvola a comando pneumatico, dalla struttura compatta e con grandi capacità di portata. L'attuazione della CM/CP avviene mediante un pistone dal funzionamento a secco azionabile da tutti i fluidi liquidi o gassosi purché neutri e puliti. La struttura molto compatta di questa valvola consente un facile montaggio anche in spazi molto ristretti.

**PECULIARITÀ**

- La valvola è insensibile ai fluidi contenenti impurità.
- Ha una notevole portata
- Può venire montata in qualsiasi posizione.
- Ha una struttura molto compatta.
- È attuata da un pistone che lavora a secco e che non richiede manutenzione.
- Non ha viti in evidenza ed è assolutamente esente da depositi di impurità.
- Consente una facile sostituzione della membrana di tenuta.
- Nella versione Standard la valvola è dotata di indicatore di posizione.

**ACCESSORI**

La valvola può essere dotata dei seguenti accessori:

- limitatore di corsa con indicatore visivo di posizione
- microinterruttori elettromeccanici di fine corsa
- microinterruttori induttivi (proximity) di fine corsa
- eletrovalvola pilota 3/2 vie per montaggio diretto o in batteria

Per maggiori informazioni visitare il sito: [www.fipnet.it](http://www.fipnet.it).

**Pneumatically actuated compact dia-phragm valve,  
NC / NO / DA**

Sizes according to ISO-BS-ASTM

The CM/CP is a compact actuated diaphragm valve with excellent flow characteristics and tight sealing. The valve is fitted with a main-tenance free actuator, which is suitable for using with all neutral liquids and gases. With the NC and NO operating modes, springs are incorporated within the actuator.

The compact design of the valve makes it ideal for mounting where space is at a premium.

An integrated position indicator provides evidence of the open or closed position of the valve.

**CHARACTERISTICS**

- The valve is insensitive to dirty and/or contaminated media.
- Excellent flow characteristics.
- Installation can be in any position
- Compact construction.
- The actuator is maintenance free
- No exposed fasteners.
- Easy replacement of the sealing diaphragm.
- The valve is provided with Position indicator as standard.

**ACCESSORIES**

The valve can be equipped with:

- stroke limiter with optical Position indicator
- electromechanical limit-switches
- inductive (proximity) limit-switches
- direct or gang mounting 3/2 way pilot solenoid valve

For more information please visit our website: [www.fipnet.it](http://www.fipnet.it).

**Vanne à membrane  
compacte à com-  
mande pneumatique  
NC / NO / DA**

Dimensions selon ISO-BS-ASTM

Le CM/CP est une vanne à commande pneumatique, avec une structure compacte et avec grande capacité. La mise en œuvre de la CM / CP est grâce à un piston de l'exploitation à sec, actionné par tous les fluides liquides ou gazeux mais neutre et propre.

La structure très compacte de cette vanne permet un montage facile même dans petits espaces.

**CARACTERISTIQUES**

- La vanne résiste aux milieux agressifs.
- Élevée coefficient de débit,
- Montage dans n'importe quelle position.
- Construction compacte,
- Mis en œuvre par un piston Fonctionne à sec que ne nécessite pas d'entretien.
- La vanne n'a pas de vis et elle n'a pas dépôts des impuretés.
- Remplacement de la membrane facilité.
- Indicateur de position intégré à la vanne.

**ACCESOIRES**

La vanne peut être équipée avec:

- limiteur de course avec indicateur de position
- micro-interrupteurs électromécaniques de fin course
- micro-interrupteurs inductive de fin course
- électrodistributeur 3/2 voies montage direct ou batterie

Pour avoir d'autres informations, visiter le site: [www.fipnet.it](http://www.fipnet.it).

**Kompakt Pneuma-tisch gesteuertes  
Membranventil,  
NC / NO / DA  
Typ 186**

Abmessungen nach ISO-BS-ASTM

Das fremdgesteuerte Membranventil ist äußeres kompakt aufgebaut und lässt hierdurch den Einsatz auf engstem Raum zu. Als Antrieb dient ein wartungsfreier Kolbenantrieb der mit allen neutralen gasförmigen und flüssigen Steuermedien betrieben werden kann.

In der Standardausführung ist das Ventil über eine Schließfeder in Ruhestellung geschlossen (NC), als Sonderausführung ist das Ventil in der Ruhestellung über eine Feder geöffnet (NO) lieferbar, und weiterhin ist eine federlose doppeltwirkende (DA) Antriebsvariante erhältlich.

**HAUPTMERKMALE**

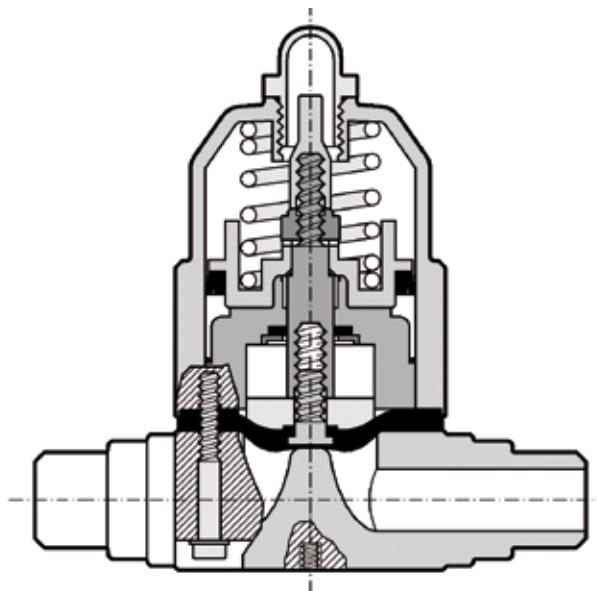

- Schmutzunempfindlich.
- Hohe durchflussleistung.
- Durchflussrichtung und einbaurage beliebig.
- Kompakte bauform.
- Wartungsfreier antrieb.
- Hermetische abdichtung.
- Einfacher membranwechsel.
- Optische stellungsanzeige.

**ZUBEHÖR**

Das Ventil kann zusätzlich ausgerüstet werden mit:

- Hubbegrenzung mit optischer Stellungsanzeige
- elektromechanischer Stellungsanzeige Auf und Zu (Mikroschalter)
- elektronischer Stellungsanzeige Auf und Zu (berührungslose Endschalter)
- 3/2 Wege Pilotventil einzeln oder als Anreichventil.

1

Variazione della pressione in funzione della temperatura per acqua o fluidi non pericolosi nei confronti dei quali il materiale è classificato CHIMICAMENTE RESISTENTE. In altri casi è richiesta un'adeguata diminuzione della pressione nominale PN. (25 anni con fattore di sicurezza).

Per l'impiego del PVC-C con temperature di esercizio superiori a 90°, si consiglia di contattare il servizio tecnico.

2

Pressione di comando in funzione della pressione di esercizio.

3

Coefficiente di flusso k<sub>v100</sub>

Per coefficiente di flusso k<sub>v100</sub> si intende la portata Q in litri al minuto di acqua a 20°C che genera una perdita di carico Δp= 1 bar per una determinata posizione della valvola. I valori k<sub>v100</sub> indicati in tabella si intendono per valvola completamente aperta.

Pressure/temperature rating for water and harmless fluids to which the material is RESISTANT. In other cases a reduction of the rated PN is required.  
(25 years with safety factor).

For PVC-C usage with working temperature higher than 90° C please contact the technical service.

Control pressure relative to working pressure.

Flow coefficient k<sub>v100</sub>

k<sub>v100</sub> is the number of litres per minute of water at a temperature of 20°C that will flow through the valve with Δp= 1 bar differential-pressure at a specified position.  
The k<sub>v100</sub> values shown in the table are calculated with the valve completely open.

Variation de la pression en fonction de la température pour l'eau et les fluides non agressifs pour lequel le matériau est considéré CHIMIQUEMENT RESISTANT. Pour les autres cas une diminution du PN est nécessaire.  
(25 années avec facteur de sécurité inclus).

Avant d'utiliser le PVC-C à température de service au-dessus de 90° C nous vous prions de contacter le service technique.

Pression de commande en fonction de la pression de service.

Coefficient de débit k<sub>v100</sub>

k<sub>v100</sub> est le nombre de litres d'eau, à une température de 20°C, qui s'écoule en une minute dans une vanne pour une position donnée avec une pression différentielle Δp de 1 bar. Les valeurs k<sub>v100</sub> indiquées sur la table sont évaluées lorsque le robinet est entièrement ouvert.

Druck/Temperatur-Diagramm für Wasser und ungefährliche Medien gegen die das Material BESTÄNDIG ist. In allen anderen Fällen ist eine entsprechende Reduzierung der Druckstufe erforderlich.  
(Unter Berücksichtigung des Sicherheitsfaktors für 25 Jahre).

Für Anwendungen von PVC-C mit Betriebstemperaturen höher als 90° C, bitte wenden Sie sich an den technischen Verkauf.

Steuerdruck/BetriebsdruckRelation.

k<sub>v100</sub> –Wert

Der k<sub>v100</sub> -Wert nennt den urchsatz in l/min für Wasser bei 20°C und einem Δp von 1 bar bei völlig geöffnetem Ventil.

**Dimensioni**

La valvola a membrana FIP è disponibile nelle seguenti versioni, i cui attacchi sono in accordo con le seguenti norme:  
 Incollaggio PVC-U:  
 EN ISO 1452, EN ISO 15493,  
 ISO 727, DIN 8062, DIN 8063  
 Incollaggio PVC-C:  
 EN ISO 15493, ISO 727-1,  
 Saldatura nel bicchiere PP-H:  
 EN ISO 15494.  
 Saldatura nel bicchiere PVDF:  
 EN ISO 10931.  
 Filettatura: ISO 228-1, DIN 2999,  
 ISO 7-1, BS 21, BS 10226.

**Dimensions**

The FIP diaphragm valve is available in the following versions, whose coupling comply with the following standards:  
 Solvent welding PVC-U:  
 EN ISO 1452, EN ISO 15493,  
 ISO 727, DIN 8062, DIN 8063  
 Solvent welding PVC-C:  
 EN ISO 15493, ISO 727-1,  
 Socket fusion PP-H:  
 EN ISO 15494.  
 Socket fusion PVDF:  
 EN ISO 10931.  
 Threaded coupling: ISO 228-1, DIN 2999, ISO 7-1, BS 21, BS 10226.

**Dimensions**

La vanne à membrane FIP est disponible dans les suivantes versions, dont les embouts sont conformes aux normes suivantes  
 Encollage PVC-U:  
 EN ISO 1452, EN ISO 15493,  
 ISO 727, DIN 8062, DIN 8063  
 Encollage PVC-C:  
 EN ISO 15493, ISO 727-1,  
 Soudure par fusion PP-H:  
 EN ISO 15494.  
 Soudure par fusion PVDF:  
 EN ISO 10931.  
 Filetage: ISO 228-1, DIN 2999, ISO 7-1, BS 21, BS 10226.

**Dimensionen**

Die FIP Membraneventile entsprechen mit ihren Anschlußmöglichkeiten folgenden Normen:  
 Klebeanschluß PVC-U:  
 EN ISO 1452, EN ISO 15493,  
 ISO 727, DIN 8062, DIN 8063  
 Klebeanschluß PVC-C:  
 EN ISO 15493, ISO 727-1,  
 Schweißanschluß PP-H:  
 EN ISO 15494.  
 Schweißanschluß PVDF:  
 EN ISO 10931.  
 Gewindeverbindung:  
 ISO 228-1, DIN 2999, ISO 7-1, BS 21, BS 10226.

## Installazione sull'impianto

- 1) La valvola può essere installata in qualsiasi posizione e direzione.  
Nelle giunzioni per incollaggio prestare la massima attenzione affinché il collante non penetri nella valvola stessa.
- 2) Collegare l'attuatore con un sistema di pilotaggio appropriato. Controllare che la pressione del fluido di comando e di esercizio sia conforme alle specifiche.
- 3) E' consigliabile ancorare la valvola ad un punto fisso.

### Nota

Poichè la guarnizione a membrana è compressa tra corpo ed attuatore, bulloni del corpo valvola devono essere controllati e serrati, se necessario, prima dell'installazione. Per questa operazione fare riferimento al foglio istruzioni.

## Connection to the system

- 1) The valve can be installed in any position and direction. When installing the valve by solvent welding take extreme care to ensure that the solvent does not run into the valve body.
- 2) Connect the actuator with a suitable pilot System. Check that both working and control pressure are in accordance with the specifications.
- 3) To fix the valve body to a steady point is recommended.

### Note

As the diaphragm is compressed between body and actuator, the bolts of the valve body should be checked and tightened, if necessary, before the installation. For this operation please read the instruction sheet.

## Montage sur l'installation

- 1) Le robinet peut être installé dans n'importe quelle position. Lorsque le raccordement est effectué par collage il faut veiller à ce que la colle ne coule pas à l'intérieur du corps, ce qui compromettrait l'étanchéité.
- 2) Connecter l'actionneur avec un système de pilotage approprié. Contrôler que les pressions de commande et d'exercice sont conformes aux spécifications.
- 3) Il est conseillé de ancrer la vanne à un point fixe.

### Note

Avant l'installation c'est nécessaire de vérifier et, si nécessaire, de bien serrer les boulons car la membrane est comprimée entre le corps et la tête.

Pour cette information, consultez les instructions.

## Einbau in eine Leitung

- 1) Das Ventil kann unabhängig von Lage und Durchflussrichtung eingebaut werden. Bei Klebeanschlüssen ist unbedingt darauf zu achten, dass kein Klebstoff in das Ventilgehäuse hineinläuft.
- 2) Der Antrieb ist mit einem passenden Pilot-Ventil zu versehen. Es ist zu überprüfen, dass Betriebsdruck und Steuerdruck den Angaben unter "Technische Daten" entsprechen.
- 3) Eine Befestigung des Ventils ist zu empfehlen.

### Merke

Da sich Dichtungen im Laufe der Zeit setzen, sollten vor Inbetriebnahme der Ventile Schrauben und Muttern körperseitig auf festen Sitz überprüft und gegebenenfalls nachgezogen werden. Für diesen Vorgang lesen Sie bitte die Anleitung.

## Smontaggio

- 1) Intercettare il fluido a monte della valvola ed assicurarsi che non rimanga in pressione (scaricare a valle se necessario).
- 2) Separare la cassa (15) dal gruppo attuatore (1), togliendo le viti (17) e le rondelle (16). Questa operazione risulta più agevole se effettuata con attuatore in pressione (Solo NC).
- 3) Svitare la membrana (14) dallo stelo dell'attuatore e rimuovere il compressore (13).

## Disassembly

- 1) Intercept the conveyed fluid upstream the valve and ensure that it is not under pressure (vent downstream if necessary).
- 2) Remove the screws (17) and the washers (16) to separate the body (15) from the actuator (1). This operation will be easier with air pressure into the actuator (NC only).
- 3) Unscrew the diaphragm (14) from the stem of the actuator and remove the compressor (13).

## Démontage

- 1) Arrêtez le fluide en amont du robinet et s'assurer qu'il ne soit plus sous pression (si nécessaire décharger en aval).
- 2) Dévisser les vis (17) et les rondelles (16) pour séparer le corps (15) du l'actionneur (1). Cette opération sera plus facile en présence d'air dans l'actionneur (pour NC).
- 3) Dévisser la membrane (14) de la tige du l'actionneur et enlever le compresseur (13).

## Demontage

- 1) Die Leitung ist an geeigneter Stelle drucklose zu manchen und zu entleeren.
- 2) Durch lösen der Schrauben (17) kann der Ventilkörper (15) abgenommen werden. Diese Operation wird bei der Ventilfunktion NC erleichtert, wenn das Ventil mit Steuerluft geöffnet wird.
- 3) Anschließend wird die Mediumsmembrane (14) durch Drehen gegen den Uhrzeigersinn aus dem Druckstück (13) und der Antriebsspinde (5) herausgedreht.

## Montaggio

- 1) Inserire l'otturatore (13) sullo stelo dell'attuatore (3).
- 2) Avvitare la membrana (2) sullo stelo, attraverso l'otturatore (13), in senso orario fino a quando non si incontra resistenza. Quindi svitare la membrana in senso antiorario fino al suo allineamento con i fori dei bulloni.
- 3) Posizionare il gruppo attuatore sul corpo valvola (15) ed avvitare le viti (17) con le rondelle (16). Questa operazione sarà più facile con attuatori in pressione (solo NC).
- 4) Quindi togliere pressione e stringere le viti (17) con una chiave dinamometrica, applicando le coppie raccomandate nel foglio istruzioni.

\* La molla è presente solo nelle versioni NC ed NO.

## Assembly

- 1) Put the compressor (13) on the actuator spindle (3).
- 2) Screw the diaphragm (2) clockwise in the valve spindle via the compressor (13) until resistant is felt upon which the diaphragm should be screwed anti-clockwise until alignment with the bolt hole centres is achieved. Open the actuator with air pressure (NC only).
- 3) Put the actuator group on the body (15) and screw in the bolts (17) with the washers (16).
- 4) Then exhaust the air pressure and tighten the bolts (17), by mean of a torque meter wrench, and applying the torques recommended in the instructions sheet.

\* The spring is only there for NC and NO valves.

## Montage

- 1) Caler l'obturateur (13) sur la bague de l'actionneur (3).
- 2) Visser la membrane (2) sur la tige du actionneur, à travers l'obturateur (13), dans le sens horaire jusqu'à rencontrer résistance; ensuite dévisser la membrane jusqu'à la correspondance des trous de la membrane de commande avec les trous de l'actionneur.
- 3) Positionner le groupe actionneur sur le corps (15) et placer les vis (17) avec les rondelles (16). Cette opération sera plus facile en présence d'air dans l'actionneur (pour NC).
- 4) Enlever ensuite la pression d'air et serrer les vis (17), avec une clé dynamométrique, en appliquant les couples de serrage indiqués sur la notice d'instruction.

\* Le ressort est présent seulement dans les vannes NC / NO.

## Montage

- 1) Das Druckstück (13) wird in der Antriebsspindel geschoben (3).
- 2) Die Membrane (2) ist in der Ventilspindel durch den Kompressor (13) im Uhrzeigersinn zu schrauben, bis Resistenz zu spüren ist. Jetzt ist die Membrane gegen den Uhrzeigersinn abzuschrauben um die Membrane mit den Loechern der Schrauben zu zentrieren.
- 3) Der Antriebauf dem Koerper (15) legen und die Schrauben (17) mit den Muttern (16) ziehen. Das Öffnen des Antriebs mit Luftdruck (bei NC-Ventile) erleichtert die Durchführung.
- 4) Luftdruck ausströmen und die Schrauben (17) mit einer Drehmomentenschlüssel mit den in der Gebrauchsanweisung empfohlenen Werten ziehen.

\* Die Feder ist nur bei NC / NO Ausführungen vorhanden.

### Attenzione

Tutte le operazioni su apparecchiature in pressione, o contenenti molle compresse, devono essere effettuate in condizioni di sicurezza per l'operatore.

### Warning

All the activities with pressurized equipments, or including compressed springs, must be undertaken in safety conditions for the operators.

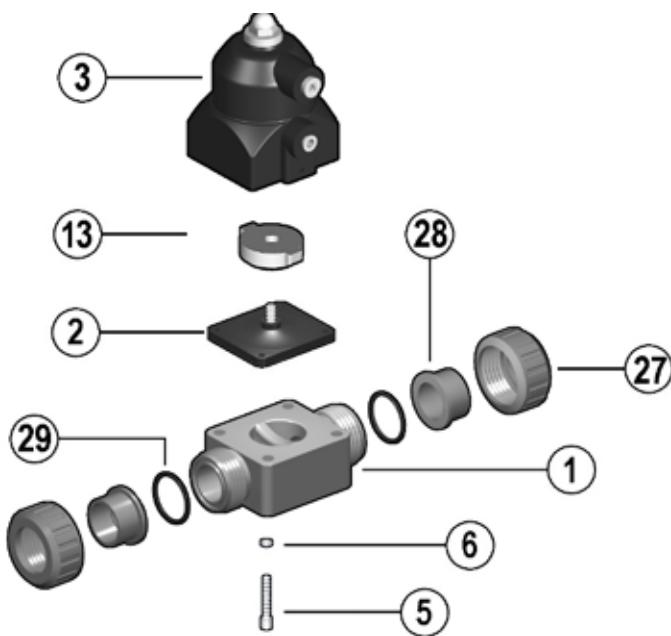

### Attention

Toute opération sur les appareils en pression, ou réglés par des ressorts comprimés, doit être effectuée en état de sécurité du personnel.

### Warnung

Alle Tätigkeiten mit druckbeaufschlagten Geräten inklusiv vorgespannter Federn, dürfen nur unter Voraussetzung von entsprechenden Sicherheitsbedingungen für das Personal durchgeführt werden.

## DK/CP DN 15÷32

PVC-U / PVC-C / PP-H / PVDF

Pneumatically actuated 2-way diaphragm valve

# DK/CP DN 15÷32

The new DK/CP diaphragm valve is particularly suitable for shutting off and regulating abrasive or dirty fluids. The new internal geometry of the body optimises fluid dynamic efficiency by increasing the flow rate and ensuring an optimum linearity of the flow adjustment curve. The DK/CP is extremely compact and very light.

## PNEUMATICALLY ACTUATED 2-WAY DIAPHRAGM VALVE

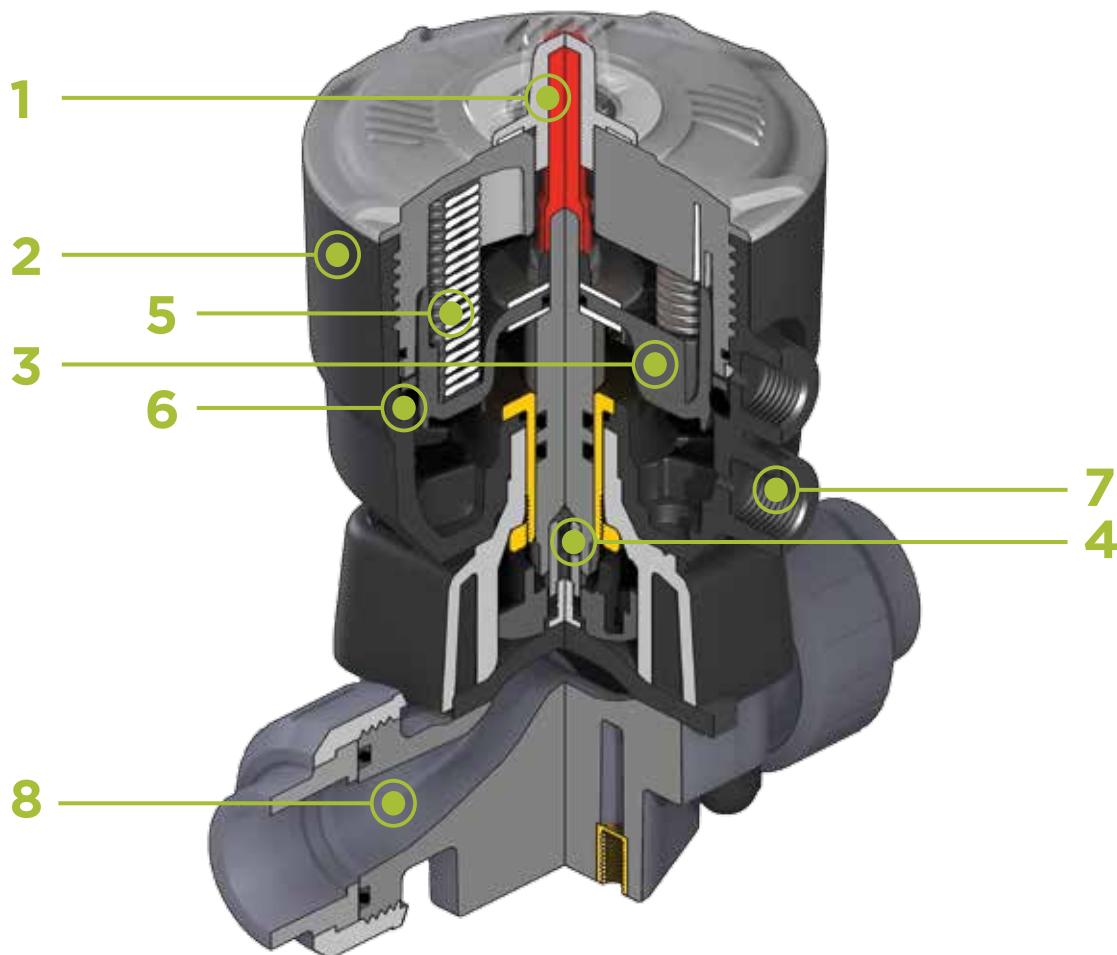

- Connection system for solvent welding and for threaded and flanged joints
- **Optimised fluid dynamic design:** maximum output flow rate thanks to the optimised efficiency of the fluid dynamics that characterise the new internal geometry of the body
- Bonnet fastening screws in STAINLESS steel protected against the external environment by PE plugs. Absence of metal parts exposed to the external environment to prevent any risk of corrosion
- **New flanged bodies:** the new bodies, characterized by a monolithic flanged structure, are available in PVC-U, PVC-C, PP-H and PVDF. This design, free of joints between the body and flanges, greatly reduces mechanical stress and increases system performance.
- **CDSA** (Circular Diaphragm Sealing Angle) system that, thanks to uniform distribution of the shutter pressure on the diaphragm seal, offers the following advantages:
  - operating torque reduction
  - reduced mechanical stress on all valve components (actuator, body and diaphragm)
  - low risk of the accumulation of deposits, contamination or damage to the diaphragm due to crystallisation
  - easy to clean valve interior

### Technical specifications

<b>Construction</b>	Pneumatically actuated diaphragm valve with body at maximized flow rate
<b>Size range</b>	DN 15 ÷ 32
<b>Nominal pressure</b>	PN 10 with water at 20° C
<b>Temperature range</b>	<b>PVC-U:</b> 0 °C ÷ 60 °C - <b>PVC-C:</b> 0 °C ÷ 100 °C <b>PP-H:</b> 0 °C ÷ 100 °C - <b>PVDF:</b> -20 °C ÷ 120 °C
<b>Coupling standards</b>	<b>Solvent welding/Welding:</b> EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931, BS 4346-1, DIN 8063, NF T54-028, ASTM D 2467, ASTM F 439. Can be coupled to pipes according to EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931, DIN 8062, NF T54-016, ASTM D 1785, ASTM F 441 <b>Thread:</b> ISO 228-1, DIN 2999, ASTM D 2464 <b>Flanging system:</b> ISO 7005-1, EN ISO 1452, EN ISO 15493, EN 1092-1, EN ISO 15494, EN ISO 10931, EN 558-1, DIN 2501, ANSI B16.5 Cl.150, JIS B2220
<b>Reference standards</b>	<b>Construction criteria:</b> EN ISO 16138, EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931 <b>Test methods and requirements:</b> ISO 9393 <b>Installation criteria:</b> DVS 2204, DVS 2221, DVS 2202-1, DVS 2201-1, DVS 2207-11, DVS 2207-15, DVS 2208-1, UNI 11242, UNI 11318
<b>Valve material</b>	PVC-U / PVC-C / PP-H / PVDF
<b>Diaphragm material</b>	EPDM, FPM, PTFE (on request NBR)
<b>Control options</b>	Pneumatic actuator

The new compact and light piston actuator in PP-GR makes the DK/CP the ideal choice for applications requiring very frequent valve operation and a long valve lifetime.

Technical specifications - Pneumatic actuator	
<b>Construction</b>	Single-acting (NC-NO) and double-acting (DA) pneumatic piston actuator
<b>Actuator material</b>	<b>Body and bonnet:</b> PP-GR <b>Position indicator cap:</b> PC
<b>Control air pressure</b>	<b>Minimum:</b> according to the working pressure and operation of the actuator (see detailed graphs) <b>Maximum:</b> NC: 6 bar - NO: 6 bar - DA: 5 bar
<b>Power supply</b>	Dry or lubricated filtered compressed air. If using other fluids, contact the FIP service centre
<b>Control fluid temperature</b>	Max 40 °C
<b>Working temperature</b>	-20 °C ÷ 50 °C
<b>Standard equipment</b>	• Optical position indicator
<b>Accessories</b>	<ul style="list-style-type: none"> <li>• Stroke limiter with position indicator</li> <li>• Stroke limiter with position indicator and emergency manual override</li> <li>• Limit switch boxes</li> <li>• Electro-pneumatic positioner</li> <li>• Pilot solenoid valves 3-5/2 ways for direct or manifold mounting</li> <li>• Distance plate</li> </ul>

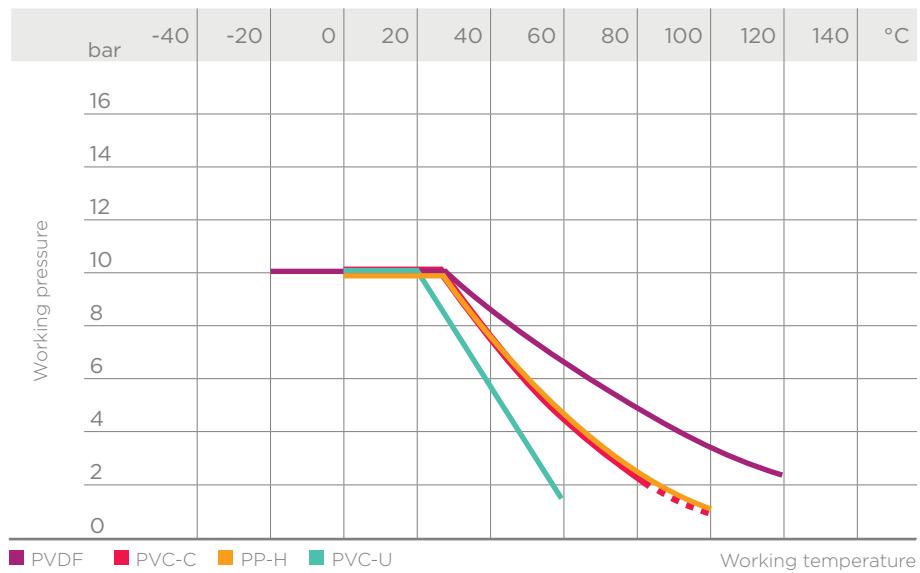

- 1 High visibility graduated optical position indicator** protected by transparent cap with seal O-ring
- 2 Light and compact piston actuator in PP-GR**, ideal for heavy-duty applications in chemically aggressive environments with a **diaphragm perimeter containment system** that ensures the perfect compression of the rubber without any lateral expansion
- 3 Piston in high strength IXEF®**. The high quality finishing of the external surface guarantees perfect slidability over the seal and ensures a long working life without any actuator maintenance
- 4 High strength stainless steel stem** with double seal O-Ring. **Floating pin connection** between the actuator stem and diaphragm to prevent concentrated loads, improve the seal and extend its lifetime
- 5 Actuator equipped with 6 independent cartridge springs** arranged radially to uniformly distribute the load on the piston.
- 6 Dual function main gasket.**
  - Piston seal:** the gasket does not move but sits securely on the actuator cylinder instead of the piston.
  - External seal:** the gasket positioned above the threaded joint between the bonnet and cylinder ensures that the coupling is not stressed by the pressure inside the actuator
- 7 Easy to install, even in confined spaces: compressed air inlets with G 1/4" threaded adjustable connections** to enable alignment with the piping. PP-GR connections prevent any risk of corrosion.
- 8 New valve body internal design.**
  - Substantially higher flow coefficient and lower pressure drops.** The degree of efficiency reached has also enabled **the size and weight** of the valve to be **reduced**.
  - Adjustment linearity:** the internal profiles of the valve greatly improve its characteristic curve, allowing **extremely sensitive and precise adjustment** along the entire length of the shutter stroke.

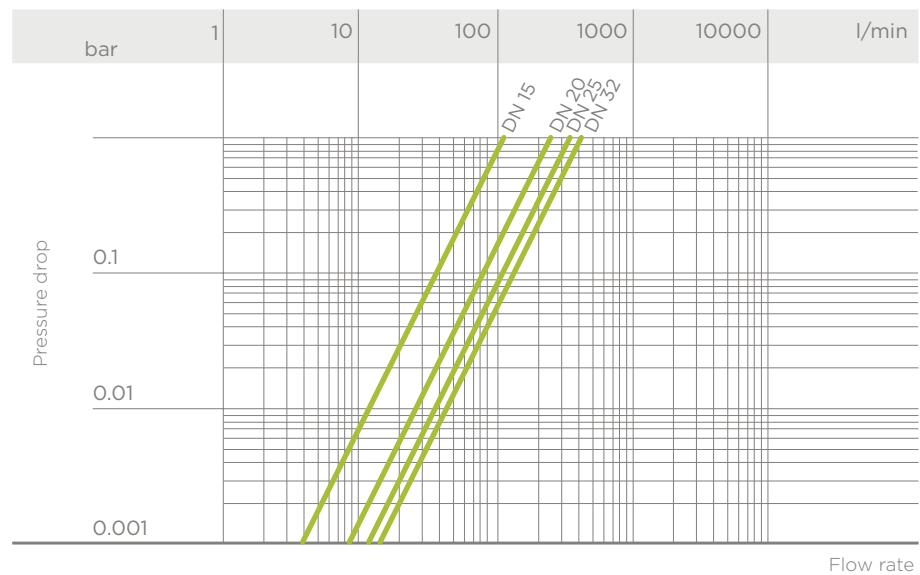

# TECHNICAL DATA

## PRESSURE VARIATION ACCORDING TO TEMPERATURE

For water and non-hazardous fluids to which the material is classified as CHEMICALLY RESISTANT. In other cases, a reduction of the nominal pressure PN is required (25 years with safety factor).

## PRESSURE DROP GRAPH

## K<sub>v</sub>100 FLOW COEFFICIENT

The K<sub>v</sub>100 flow coefficient is the Q flow of litres per minute of water at a temperature of 20°C that will generate  $\Delta p = 1$  bar pressure drop at a certain valve position.

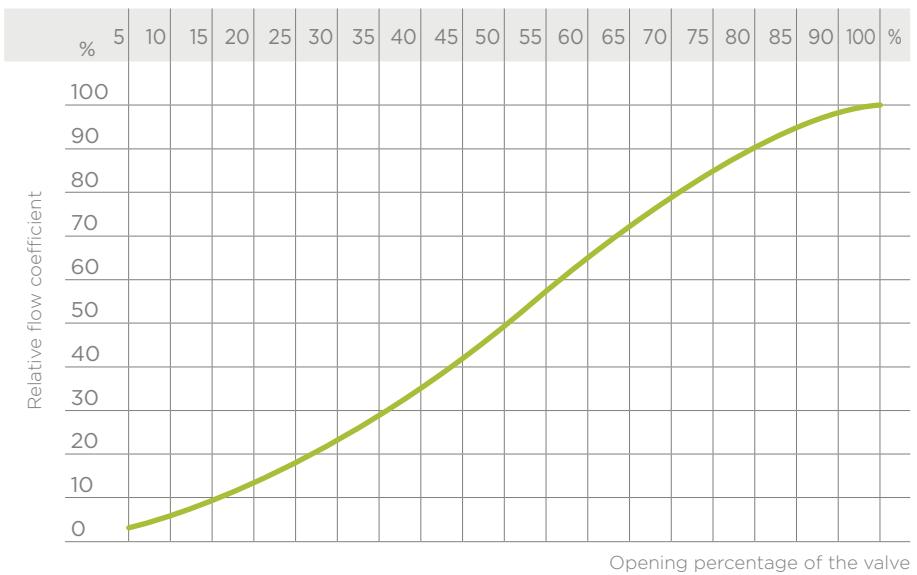

The K<sub>v</sub>100 values shown in the table are calculated with the valve completely open.

DN	15	20	25	32
K <sub>v</sub> 100 l/min	112	261	445	550

# TECHNICAL DATA

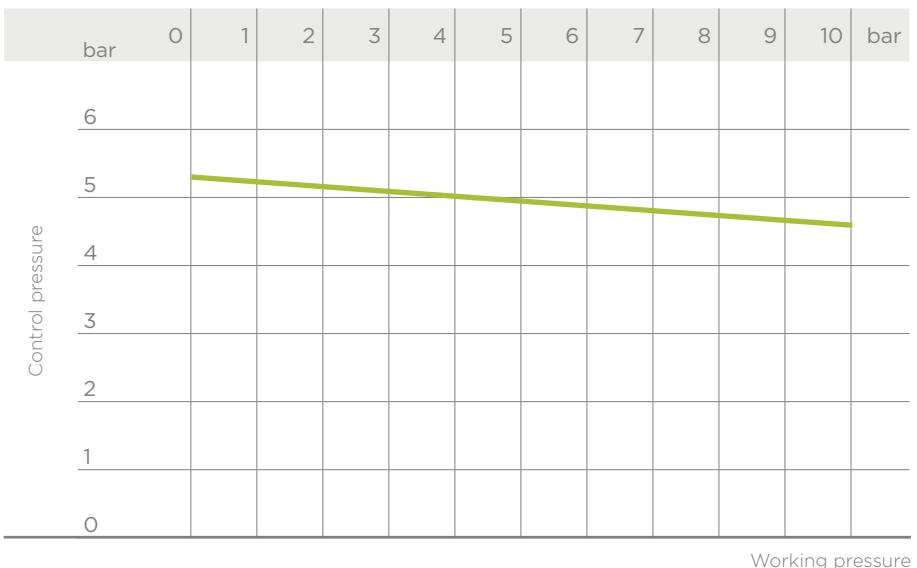

## RELATIVE FLOW COEFFICIENT GRAPH

The relative flow coefficient is the flow rate through the valve as a function of the degree of valve opening.

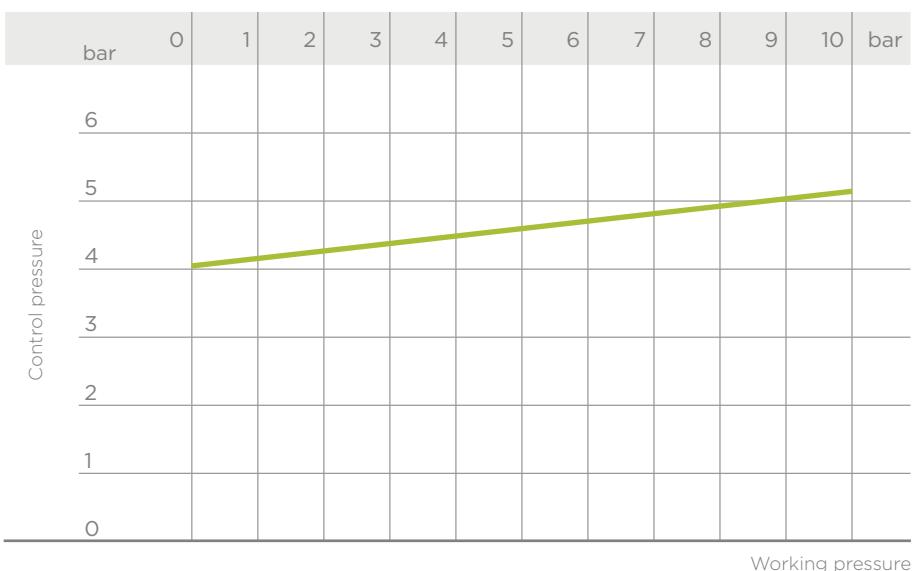

## CONTROL PRESSURE ACCORDING TO WORKING PRESSURE DK/CP NC

Minimum control pressure according to working pressure with EPDM/FPM diaphragm

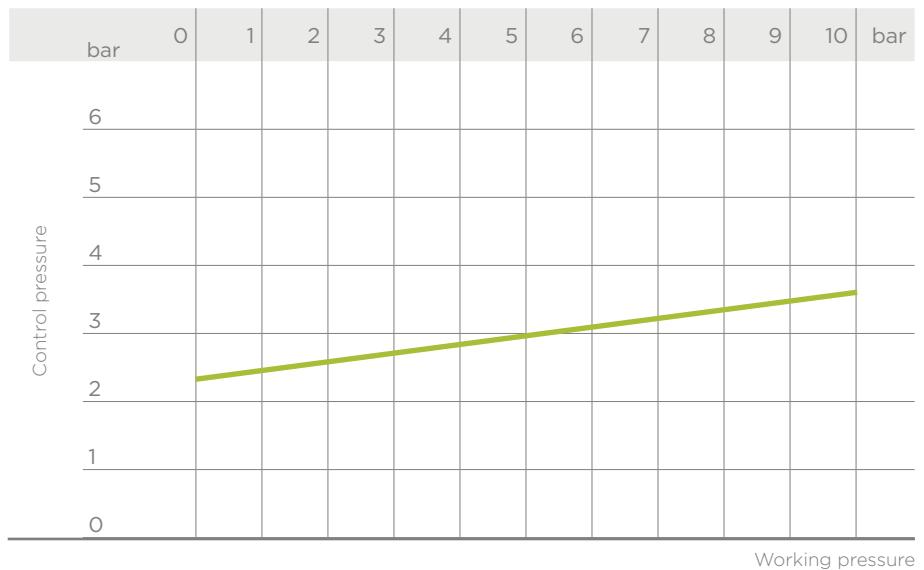

## CONTROL PRESSURE ACCORDING TO WORKING PRESSURE DK/CP NO

# FASTENING AND SUPPORTING

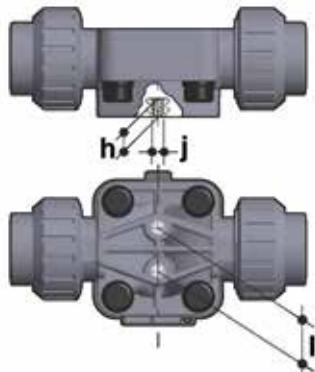

All valves, whether manual or actuated, must be adequately supported in many applications.

The DK valve series is therefore provided with an integrated bracket that permits direct anchoring of the valve body without the need of other components.

For wall or panel installation, dedicated PMDK mounting plates which are available as accessories can be used. These plates should be fastened to the valve before wall installation.

PMDK plates also allow DK valve alignment with FIP ZIKM pipe clips.

# CUSTOMISATION

The DK/CP DN 15÷32 valve can be customised using a customisation plate in white PVC.

The plate (B), housed in the transparent protection cap (A), can be removed and, once overturned, used for indicating identification serial numbers or service indications on the valves such as, for example, the valve function in the system, the conveyed fluid and specific information for customer service, such as the customer name or installation date or location. The waterproof transparent protection cap with seal O-Ring protects the customisation plate against deterioration.

To access the customisation plate, proceed as follows:

- 1) Disconnect the valve from the pneumatic connections.
- 2) Unscrew the transparent protection cap (fig. 1).
- 3) Remove the plate and proceed with the customisation (fig. 2).
- 4) Re-assemble everything making sure that the transparent protection cap O-Ring remains in its seating.

## DISASSEMBLY

- 1) Isolate the valve from the line (release the pressure and empty the pipeline).
- 2) Open the valve with compressed air (NC-DA) to drain any residual liquid from the valve.
- 3) Disconnect the valve from the pneumatic and electrical connections.
- 4) Unscrew the union nuts (11) and extract the valve.
- 5) Remove the protection plugs (14) and bolts (13) with their washers (12); this operation will be made easier if the actuator is pressurised (NC).
- 6) Separate the valve body (8) from the actuator (4).
- 7) Unscrew the diaphragm (7) and remove the compressor (6); this operation will be made easier if the actuator is not pressurised (NC).

## ASSEMBLY

- 1) Insert the compressor (6) on the actuator stem (4), aligning it correctly in its housing (fig. 3).
- 2) Screw the diaphragm (7) onto the stem, aligning it correctly with its housing on the actuator.
- 3) Mount the actuator (4) on the valve body (8) and screw in the bolts (13) with the relative washers (12); this operation will be made easier if the actuator is pressurised (NC).
- 4) Tighten the bolts (13) evenly (diagonally) to the tightening torque suggested on the relative instruction sheet.
- 5) Replace the protection plugs (14).
- 6) Position the valve between the end connectors (10) and tighten the union nuts (11), making sure that the socket seal O-rings (9) do not exit their seats.
- 7) Reconnect the valve to the pneumatic and electrical connections

Fig. 3

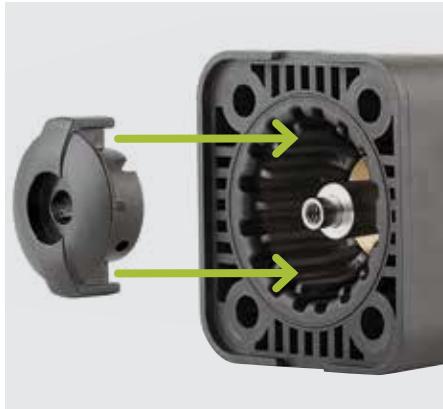

Fig. 4

## INSTALLATION

Before proceeding with installation, please follow these instructions carefully: (instructions refer to versions with union ends). The valve can be installed in any position and in any direction.

- 1) Check that the pipes to be connected to the valve are aligned in order to avoid mechanical stress on the threaded joints.
- 2) Unscrew the union nuts (11) and insert them on the pipe segments.
- 3) Solvent weld or screw the end connectors (10) onto the pipe ends.
- 4) Position the valve body between the end connectors making sure the socket seal O-Rings (9) do not exit the seats.
- 5) Completely tighten the union nuts (11).
- 6) If necessary, support the pipework with FIP pipe clips or by means of the carrier built into the valve itself (see paragraph "Fastening and supporting").
- 7) Connect the compressed air as indicated in paragraph "Compressed air connections". For valves with electric accessories, refer to the specific technical manual supplied with the accessory-

When installing in confined spaces, the connections can be oriented in line with the piping (fig. 4).

**!** **Note:** before putting the valve into service, check that the bolts on the valve body (8) are tightened correctly at the suggested torque.

*O* Aliaxis

**DKM/CP DN 40÷65**  
PVC-U / PVC-C / PP-H / PVDF

Pneumatically actuated 2-way diaphragm valve

# DKM/CP DN 40÷65

The DKM/CP diaphragm valve is particularly suitable for shutting off and regulating abrasive or dirty fluids.

The new internal geometry of the body optimises fluid dynamic efficiency by increasing the flow rate and ensuring an optimum linearity of the flow adjustment curve. The DKM/CP is extremely compact and very light.

## PNEUMATICALLY ACTUATED 2-WAY DIAPHRAGM VALVE

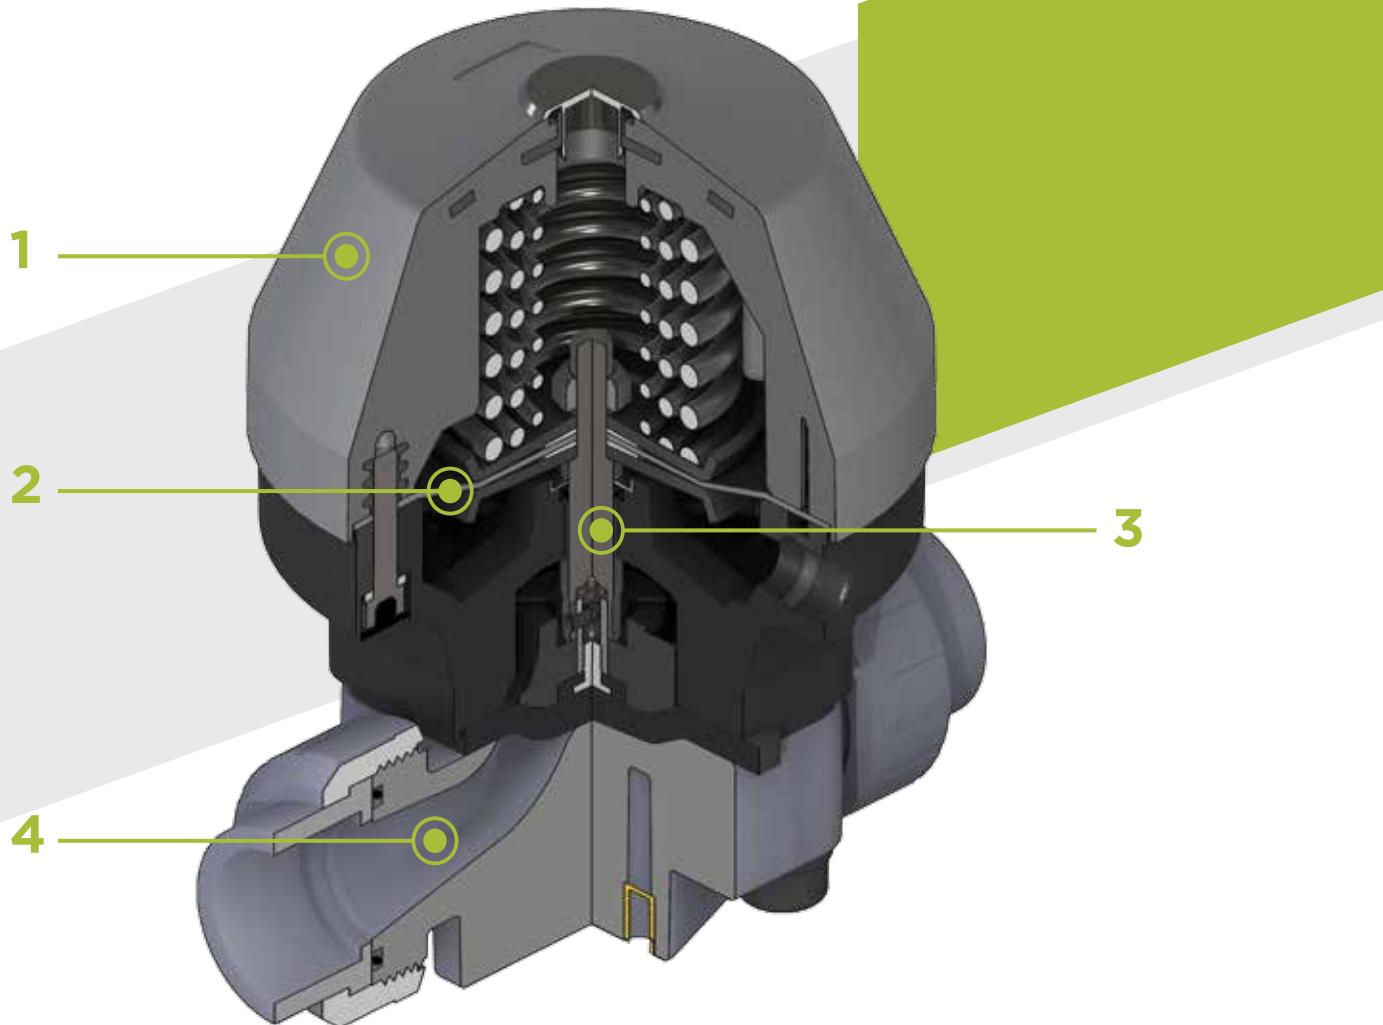

- Connection system for solvent weld, threaded and flanged joints
- **Optimised fluid dynamic design:** maximum output flow rate thanks to the optimised efficiency of the fluid dynamics that characterise the new internal geometry of the body
- **Robust and reliable diaphragm actuator in PP-GR** ideal for heavy-duty applications in chemically aggressive environments
- **Modularity of the range:** only 3 actuators and diaphragms for 5 different valve sizes
- Bonnet fastening screws in stainless steel protected against the external environment by PE plugs.
- **CDSA** (Circular Diaphragm Sealing Angle) system that, thanks to the uniform distribution of shutter pressure on the diaphragm seal, offers the following advantages:
  - reduction in the tightening torque of the screws fixing the actuator to the valve body
  - reduced mechanical stress on all valve components (actuator, body and diaphragm)
  - easy to clean valve interior
  - low risk of the accumulation of deposits, contamination or damage to the diaphragm due to crystallisation

### Technical specifications

<b>Construction</b>	Pneumatically actuated diaphragm valve with body at maximized flow rate
<b>Size range</b>	DN 40 ÷ 65
<b>Nominal pressure</b>	PN 10 with water at 20 °C
<b>Temperature range</b>	<b>PVC-U:</b> 0 °C ÷ 60 °C - <b>PVC-C:</b> 0 °C ÷ 100 °C <b>PP-H:</b> 0 °C ÷ 100 °C - <b>PVDF:</b> -20 °C ÷ 120 °C
<b>Coupling standards</b>	<b>Solvent welding/Welding:</b> EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931, BS 4346-1, DIN 8063, NF T54-028, ASTM D 2467, ASTM F 439. Can be coupled to pipes according to EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931, DIN 8062, NF T54-016, ASTM D 1785, ASTM F 441 <b>Thread:</b> ISO 228-1, DIN 2999, ASTM D 2464 <b>Flanging system:</b> ISO 7005-1, EN ISO 1452, EN ISO 15493, EN 1092-1, EN ISO 15494, EN ISO 10931, EN 558-1, DIN 2501, ANSI B16.5 Cl.150, JIS B2220
<b>Reference standards</b>	<b>Construction criteria:</b> EN ISO 16138, EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931 <b>Test methods and requirements:</b> ISO 9393 <b>Installation criteria:</b> DVS 2204, DVS 2221, DVS 2202-1, DVS 2201-1, DVS 2207-11, DVS 2207-15, DVS 2208-1, UNI 11242, UNI 11318
<b>Valve material</b>	PVC-U / PVC-C / PP-H / PVDF
<b>Diaphragm material</b>	EPDM, FPM, PTFE (on request NBR)
<b>Control options</b>	Pneumatic actuator

The diaphragm actuator in PP-GR is characterized by its robust construction, making DKM the ideal choice for demanding and chemically aggressive applications.

Technical specifications - pneumatic actuator	
<b>Construction</b>	Single-acting (NC-NO) and double-acting (DA) pneumatic piston actuator
<b>Actuator Material</b>	<b>Body and bonnet:</b> PP-GR
<b>Control air pressure</b>	<b>Minimum:</b> according to the working pressure and operation of the actuator (see detailed graphs ) <b>Maximum:</b> NC: 6 bar - NO: 5 bar - DA: 5 bar
<b>Power supply</b>	Dry or lubricated filtered compressed air. If using other fluids, contact the FIP service centre
<b>Control fluid temperature</b>	Max 40 °C
<b>Working temperature</b>	-20 °C ÷ 50 °C
<b>Accessories</b>	<ul style="list-style-type: none"> <li>• Optical position indicator</li> <li>• Stroke limiter with position indicator</li> <li>• Stroke limiter with position indicator and emergency manual override</li> <li>• Limit switch boxes</li> <li>• Electro-pneumatic positioner</li> <li>• Pilot solenoid valves 3/2 ways for direct or manifold mounting</li> <li>• Distance plate</li> </ul>

**1** Diaphragm actuator in PP-GR characterized by its **robust construction**. In the configuration Normally Closed, the upper part is equipped with steel reinforcement. **Absence of metal parts exposed to the external environment** prevents any risk of corrosion

**2** The special **control diaphragm** reinforced with fibres can reach up to 10 million drives without showing signs of wear

**3** **High strength stainless steel stem** with floating pin connection between the actuator stem and diaphragm to prevent concentrated loads, improve the seal and extend its lifetime

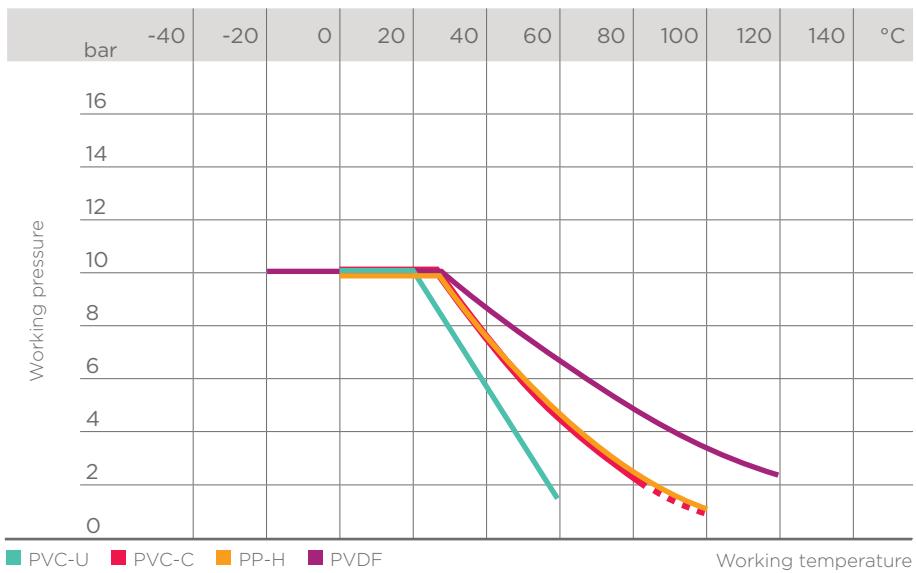

**4** New design of valve body interior  
**Substantially increased flow coefficient** and reduced pressure drop. The degree of efficiency reached has also enabled **the size and weight** of the valve to be **reduced**

**Adjustment linearity:** the internal profiles of the valve also greatly improve its characteristic curve, resulting in **extremely sensitive and precise adjustment** along the entire stroke of the shutter

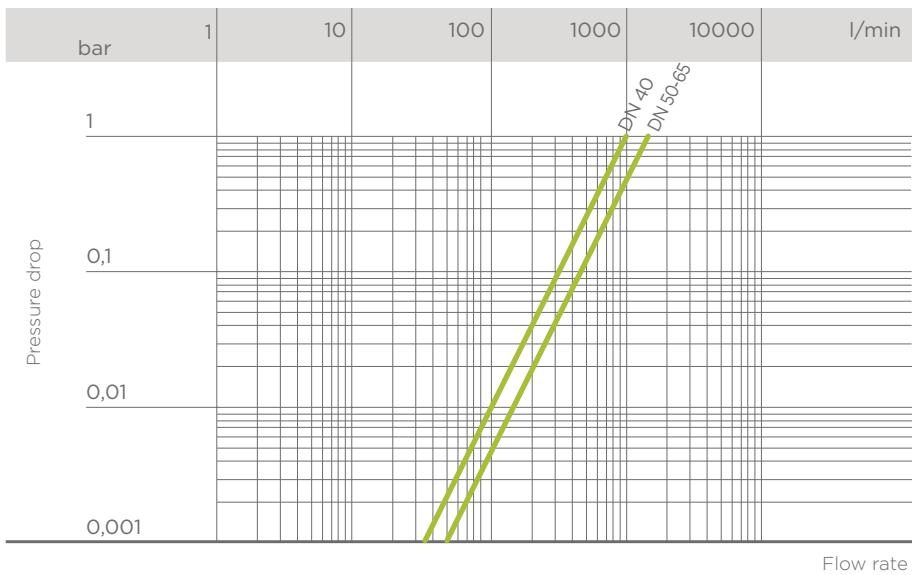

# TECHNICAL DATA

## PRESSURE VARIATION ACCORDING TO TEMPERATURE

For water and non-hazardous fluids with regard to which the material is classified as CHEMICALLY RESISTANT. In other cases, a reduction of the nominal pressure PN is required (25 years with safety factor).

## PRESSURE DROP GRAPH

## K<sub>v</sub>100 FLOW COEFFICIENT

The K<sub>v</sub>100 flow coefficient is the Q flow rate of litres per minute of water at a temperature of 20 °C that will generate Δp= 1 bar pressure drop at a certain valve position.

The K<sub>v</sub>100 values shown in the table are calculated with the valve completely open.

DN	40	50	65
K <sub>v</sub> 100 l/min	1087	1648	1600

# TECHNICAL DATA

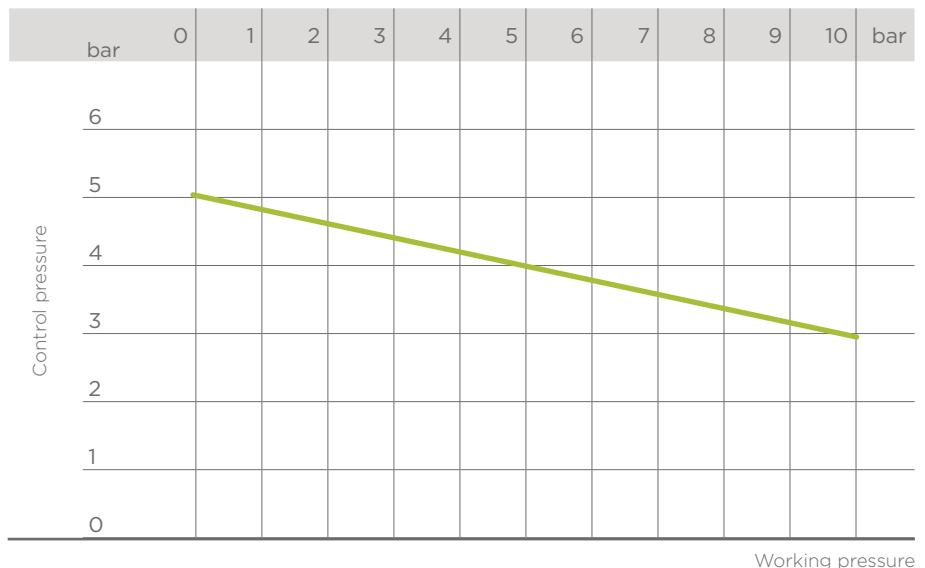

## RELATIVE FLOW COEFFICIENT GRAPH

The relative flow coefficient refers to the variation in the flow rate as a function of the valve opening stroke.

# FASTENING AND SUPPORTING

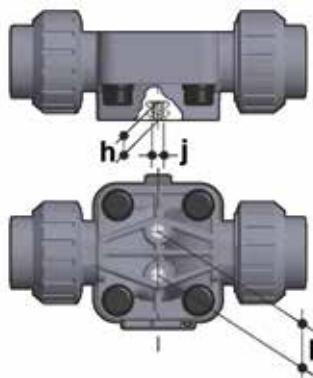

All valves, whether manual or actuated, must be adequately supported in many applications.

The DK valve series is therefore provided with an integrated bracket that permits direct anchoring of the valve body without the need of other components.

For wall installation, dedicated PMDK mounting plates which are available as accessories can be used. These plates should be fastened to the valve before wall installation.

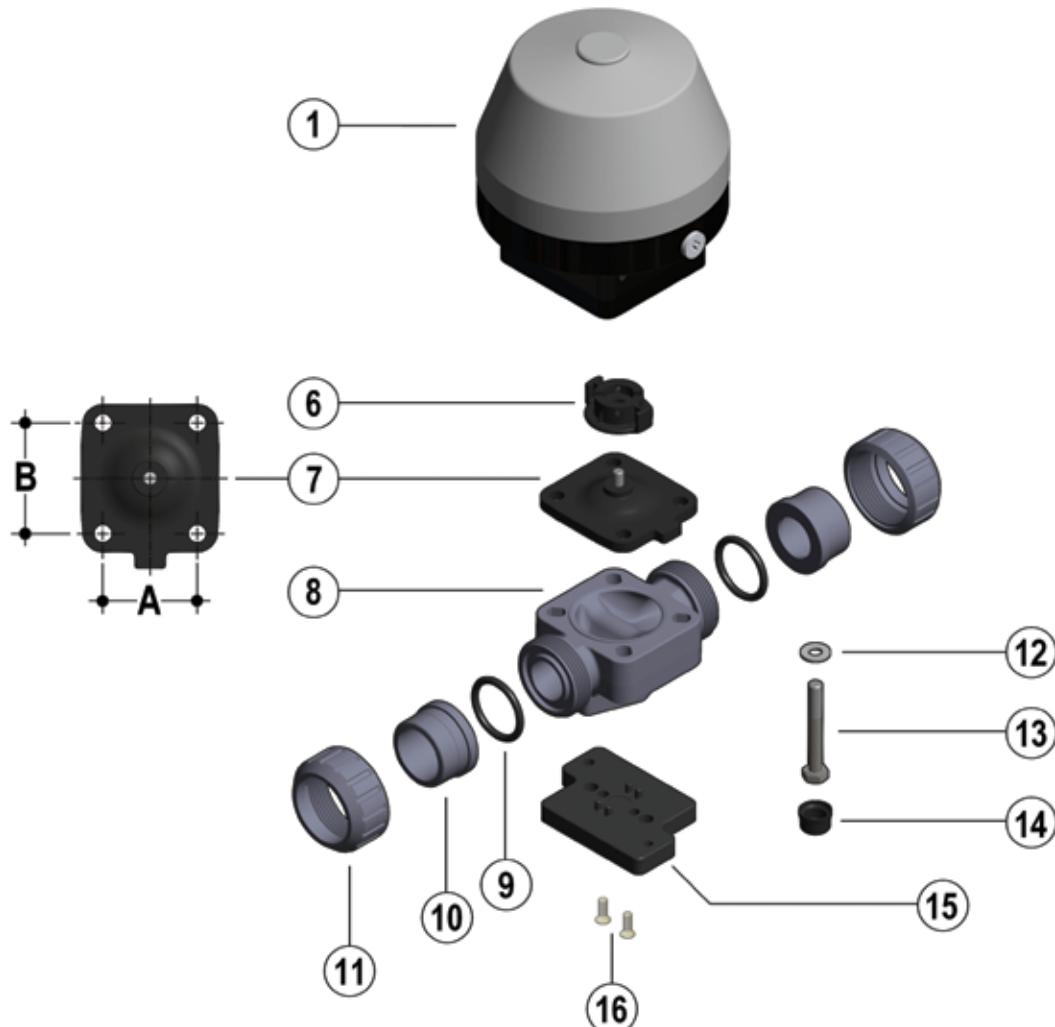

The PMDK plate also allows the DK valve to be aligned with FIP ZIKM pipe clips.

## DISASSEMBLY

- 1) Isolate the valve from the line (release the pressure and empty the pipeline).
- 2) Open the valve with compressed air (NC-DA) to drain any residual liquid from the valve.
- 3) Disconnect the valve from the pneumatic and electrical connections.
- 4) Fully unscrew the union nuts (11) and extract the valve sideways.
- 5) Remove the protection plugs (14) and bolts (13) with the relative washers (12). This operation will be made easier if the actuator is pressurised (NC).
- 6) Separate the valve body (8) from the actuator (1).
- 7) Unscrew the diaphragm (7) and remove the compressor (6). This operation will be made easier if the actuator is not pressurised (NC).

## ASSEMBLY

- 1) Insert the compressor (6) on the actuator stem (1) aligning it correctly in its housing (fig. 1).
- 2) Screw the diaphragm (7) onto the stem, aligning it correctly with its housing on the actuator.
- 3) Fit the actuator (1) on the valve body (8) and tighten the bolts (13) with the relative washers (12). This operation will be made easier if the actuator is pressurised (NC).
- 4) Tighten the bolts (13) evenly (diagonally) to the tightening torque suggested on the relative instruction sheet.
- 5) Replace the protection plugs (14)
- 6) Position the valve between the end connectors (10) and tighten the union nuts (11), making sure that the socket seal O-rings (9) do not exit their seats.
- 7) Reconnect the valve to the pneumatic and electrical connections

Fig. 1

**Note:** All operations on equipment under pressure or containing compressed springs must be carried out under safe conditions for the operator.

## INSTALLATION

Before proceeding with installation, please follow these instructions carefully: (these instructions refer to union end versions). The valve can be installed in any position and in any direction.

- 1) Check that the pipes to be connected to the valve are aligned in order to avoid mechanical stress on the threaded joints.
- 2) Unscrew the union nuts (11) and insert them on the pipe segments.
- 3) Solvent weld or screw the end connectors (10) onto the pipe ends.
- 4) Position the valve body between the end connectors, making sure that the socket seal O-rings (9) do not exit their seats.
- 5) Fully tighten the union nuts (11).
- 6) If necessary, support the pipework with FIP pipe clips or by means of the carrier built into the valve itself (see paragraph "Fastening and supporting").
- 7) Connect the compressed air as indicated in paragraph "Compressed air connections". For valves with electric accessories, refer to the specific technical manual supplied with the accessory.

**Note:** before putting the valve into service, check that the bolts on the valve body (8) are tightened correctly at the suggested torque.

## Valvola a membrana a comando pneumatico, NC

La VM/NC è una valvola dotata di un attuatore a membrana a semplice effetto normalmente chiuso che non richiede manutenzione.

Il vantaggio della valvola a membrana rispetto ad altri sistemi è la semplicità di funzionamento, unitamente al design compatto.

Può venire installata in qualsiasi posizione e può essere impiegata con fluidi liquidi o gassosi; inoltre è particolarmente adatta per fluidi abrasivi o contenenti impurità.

Con questo tipo di valvola vengono ridotti al minimo i rischi di colpo d'ariete.

L'innovativo sistema di tenuta CDSA - Circular Diaphragm Sealing Area - utilizzato fino al DN50, offre, inoltre, i seguenti vantaggi:

- distribuzione uniforme della pressione dell'otturatore sulla membrana di tenuta
- diminuzione fino al 20% della coppia di serraggio delle viti che fissano il corpo valvola all'attuatore
- minore stress meccanico per tutti i componenti della valvola (attuatore, corpo e membrana)
- facilità di pulizia delle zone interne della valvola
- minimizzazione del rischio di accumulo di depositi, contaminazione o danneggiamento della membrana a causa di fenomeni di cristallizzazione
- riduzione della coppia di manovra fino al 40%

La speciale membrana in fibra tessile dell'attuatore, permette di aprire/chiudere fino a  $10^6$  volte senza mostrare segni di usura.

### PECULIARITÀ

- gamma dimensionale da DN 15 mm a DN 100 mm
- costruzione robusta con attuatore adatto ad ambienti chimicamente aggressivi
- possibilità di allineare sul medesimo asse di centro tubo tutti i corpi valvola dal DN 15 al DN 50
- sospensione flottante della membrana, per evitare carichi concentrati ed aumentarne la tenuta e la durata
- tenuta superiore membrana completamente circolare (CDSA).

### ACCESSORI

- limitatore di corsa
- limitatore di corsa con indicatore visivo di posizione
- limitatore di corsa con indicatore di posizione e comando manuale di emergenza
- indicatore visivo di posizione
- microinterruttori di fine corsa
- posizionatore elettropneumatico
- elettrovalvola pilota 3/2 vie per montaggio diretto o in batteria

• Per maggiori informazioni visitare il sito: [www.fipnet.it](http://www.fipnet.it)

## Pneumatically actuated diaphragm valve, NC

The diaphragm valve type VM/NC is equipped with a maintenance free single acting normally closed actuator, diaphragm type.

The advantage of the diaphragm valves, against other types of valves, consists of simplicity in function and compact design.

The diaphragm valve can be installed in any position and it can be used with liquid and gaseous fluids, and is particularly suitable for dirty or abrasive media.

Water hammer risk is reduced with this valve.

The innovative CDSA - Circular Diaphragm Sealing Area - system (up to DN50) offers the following mechanical advantages:

- uniform distribution of the pressure made by the compressor on the sealing diaphragm
- up to 20% of bolt tightening torque reduction
- reduced mechanical stress on all valve components (actuator, body and diaphragm)
- easy internal cleaning
- lower risk of deposit accumulation, fluid contamination and damaging of the diaphragm due to the eventual crystallization
- reduction of the closing handwheel torque of the manual valves up to 40%

The flat, cloth reinforced, neoprene control diaphragm shows little wear and tear after  $10^6$  duty cycles.

### CHARACTERISTICS

- size range from DN 15 mm up to DN 100 mm
- rugged construction with actuator suitable for use in chemically aggressive environments
- possible alignment of all valve bodies DN15-50 at the same height from the ground
- floating diaphragm suspension, to prevent point loading in the diaphragm center, for better sealing and endurance
- fully circular top diaphragm sealing (CDSA).

### ACCESSORIES

- stroke limiter
- stroke limiter with optical Position indicator
- stroke limiter with optical Position indicator and emergency manual override
- optical position indicator
- limit-switches box
- electro pneumatic positioner
- direct or gang mounting 3/2 way pilot solenoid valve
- For more information please visit our website: [www.fipnet.it](http://www.fipnet.it)

## Vanne à membrane à commande pneumatique, NC

The vanne à membrane type VM/NC est équipée d'un actionneur pneumatique normallement fermée qui ne nécessite pas d'entretien.

L'avantage du robinet à membrane, en comparaison avec d'autres types de robinets, réside dans sa simplicité de fonctionnement et sa conception compacte.

Ce robinet est principalement utilisé pour éviter les problèmes de contamination ou pour le transport de fluides abrasifs.

Il peut être installé dans n'importe quelle position et réduit le risque de "coup de bâlier".

Le nouveau système CDSA - Circular Diaphragm Sealing Area - utilisé jusqu'au DN50, offre les avantages suivantes:

- distribution uniforme de la pression du compresseur sur la membrane.
- réduction jusqu'au 20% de la couple de serrage des écrous qui fixent le corps de la vanne à son actuateur
- réduit stress mécanique pour tous les composants de la vanne (actuateur, corps et membrane)
- simple nettoyage des parties internes du corps de la vanne
- réduction du risque d'accumulation de dépôts, de contamination où de causer des dégâts à la membrane par cristallisation
- réduction de la couple de serrage jusqu'au 40%

L'actionneur peut fonctionner jusqu'à  $10^6$  cycles sans montrer aucune usure considérable.

### CARACTERISTIQUES

- gamme dimensionnelle de DN 15 mm à DN 100 mm
- construction robuste avec actionneur qui peut être utilisé dans environnements chimiquement agressifs
- alignement possible des axes (DN 15-50)
- suspension flottante de la membrane évitant une charge concentrée sur le centre de la membrane, pour une meilleure étanchéité et durée de vie
- étanchéité supérieure de la membrane complètement circulaire (CDSA).

### ACCESOIRES

- limiteur de course
- limiteur de course avec indicateur de position
- limiteur de course avec indicateur de position et commande manuelle de secours
- indicateur de position
- boîtier avec 2 contacts de fin course
- positionneur électropneumatique
- électrovanne de commande 3/2. Montage direct ou en batterie
- Pour avoir d'autres informations, visiter le site: [www.fipnet.it](http://www.fipnet.it)

## Pneumatisch gesteuertes Membranventil, NC Typ 485

Das Ventil ist durch Federkraft normal geschlossen (NC) und wird durch das Steuermedium geöffnet.

Der glattflächige Antrieb ist wartungsfrei und kann mit neutralen, flüssigen und gasförmigen Steuermedien betrieben werden. Die gewebeverstärkte Steuermembrane ist außen gefasst und für eine hohe Schaltspielzahl ausgelegt.

Das Membranventil wird vorzugsweise für flüssige Medien eingesetzt, die aggressiv, abrasiv, verschmutzt oder breiig bis pastös sein können.

Das innovative CDSA-Design - Kreisrundes Membran Dichtsystem (bis DN 50) bietet folgende mechanischen Vorteile:

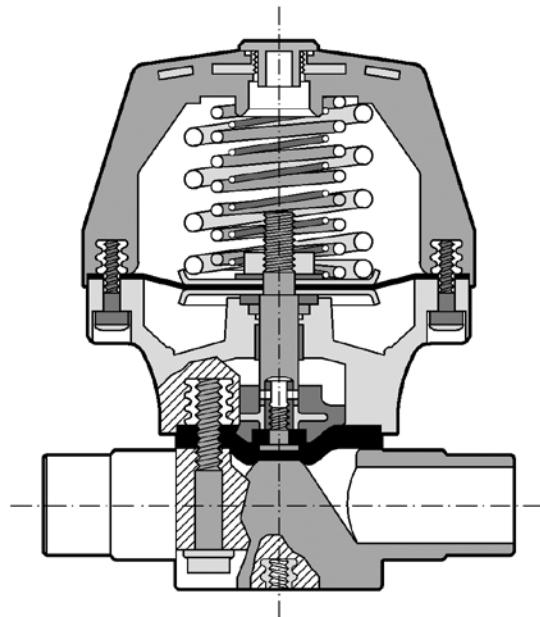

- Optimale Druckverteilung über das Druckstück auf die abdichtende Membran
- bis zu 20% Reduzierung der Anzugsdrehmomente
- geringere Belastung aller Ventilkomponenten (Antrieb, Ventilkörper und Dichtmembran)
- einfache und effiziente interne Reinigung
- deutlich geringeres Risiko der Ansammlung von Feststoffen und Auskristallisationen, dadurch werden Rekontaminationen und Beschädigung der Membrane reduziert
- Reduzierung der notwendigen Schließkräfte bei handbetätigten Ventilen um bis zu 40%

### HAUPTMERKMALE

- Größen von DN 15 mm bis DN100 mm
- robuste Bauform mit Antriebmaterial geeignet für aggressive Atmosphäre - Mittelachsen der Ventilkörper können auf dasselbe Niveau gebracht werden
- flexible Membranaufhängung um punktuelle Anpressung der Mediumsmembrane zu vermeiden
- Konstruktiv bedingte kreisrunde und damit gleichmäßige Membranklemmung (CDSA)

### ZUBEHÖR

- Hubbegrenzung
- Hubbegrenzung mit optischer Stellungsanzeige
- Hubbegrenzung mit optischer Stellungsanzeige und Handnothandbetätigung
- optischer Stellungsanzeige
- elektromechanischer Stellungsanzeige Auf und Zu
- elektronischer Stellungsanzeige Auf und Zu
- Elektropneumatischer Stellungsregler
- 3/2 Wege Pilotventil einzeln oder als Anreichventil.
- Für weitere Details schauen Sie auf unsere Website: [www.fipnet.it](http://www.fipnet.it)

## Dati Tecnici

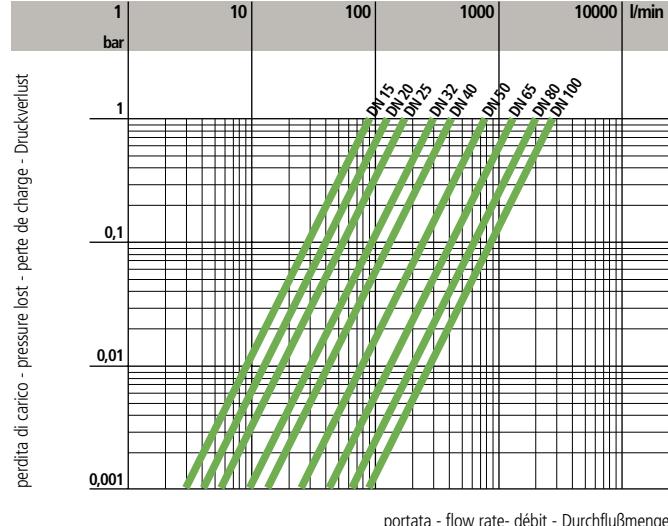

1

## Technical Data

pressione di esercizio  
working pressure  
pression de service  
Betriebsdruck

2

Variazione della pressione in funzione della temperatura per acqua o fluidi non pericolosi nei confronti dei quali il materiale è classificato CHIMICAMENTE RESISTENTE. In altri casi è richiesta un'adeguata diminuzione della pressione nominale PN.  
(25 anni con fattore di sicurezza).

Per l'impiego del PVC-C con temperature di esercizio superiori a 90°, si consiglia di contattare il servizio tecnico.

Pressure/temperature rating for water and harmless fluids to which the material is RESISTANT. In other cases a reduction of the rated PN is required.  
(25 years with safety factor).

For PVC-C usage with working temperature higher than 90° C please contact the technical service.

## Données Techniques

4

3

Coefficiente di flusso  $k_{v100}$   
Per coefficiente di flusso  $k_{v100}$  si intende la portata Q in litri al minuto di acqua a 20°C che genera una perdita di carico  $\Delta p = 1$  bar per una determinata posizione della valvola. I valori  $k_{v100}$  indicati in tabella si intendono per valvola completamente aperta.

Flow coefficient  $k_{v100}$   
 $k_{v100}$  is the number of litres per minute of water at a temperature of 20°C that will flow through the valve with  $\Delta p = 1$  bar differential-pressure at a specified position.  
The  $k_{v100}$  values shown in the table are calculated with the valve completely open.

Coefficient de débit  $k_{v100}$   
 $k_{v100}$  est le nombre de litres d'eau, à une température de 20°C, qui s'écoule en une minute dans une vanne pour une position donnée avec une pression différentielle  $\Delta p$  de 1 bar.  
Les valeurs  $k_{v100}$  indiquées sur la table sont évaluées lorsque le robinet est entièrement ouvert

$k_{v100}$  – Wert  
Der  $k_{v100}$ -Wert nennt den urchsatz in l/min für Wasser bei 20°C und einem  $\Delta p$  von 1 bar bei völlig geöffnetem Ventil.

4

Pressione di comando in funzione della pressione di esercizio.

Control pressure relative to working pressure.

Pression de commande en fonction de la pression de service.

Steuerdruck je nach Betriebsdruck abhängig.

Pressione di esercizio - Working Pressure - Pression de service - Betriebsdruck	max 10 bar (DN 15÷50) max 6 bar (DN 65÷100)
Pressione di comando - Control pressure - Pression de commande - Steuerdruck	max 6 bar
Funzione di comando - Control function - Fonction de commande - Steuerfunktion	NC
Temperatura del fluido di comando* - Control fluid temperature* Température de le fluid de commande* - Temperatur des Steuemediums*	max 40° C
Capacità attuatore** - Actuator capacity** - Capacité actionneur** - Steuervolumen**	DN 15-25=0.16 NI DN 32-40=0.36 NI DN 50=1.15 NI DN 65-80=2.1 NI DN 100=2.1 NI

\* Fluido di comando: usare sia aria filtrata secca che aria lubrificata. (Per utilizzo di altri fluidi consultare il ns. servizio tecnico).

\*\* NI: Normal-litro  
volume alla pressione atmosferica

\* The control fluid: use both dry filtered air and lubricated air (for others fluids please contact our technical service).

\*\* NI: Normal-liter  
volume et atmospheric pressure

\* Le fluide de commande: utiliser de l'air filtré soit sec soit lubrifié (Pour utilisation de autres fluides consulter le bureau technique).

\*\* NI: Normal-litre  
volume à la pression atmosphérique

\* Das Steuermedium soll neutral und sauber sein: Benutzen Sie sowohl filtrierte trockene Luft, als auch befeuchtete Luft. Wenn Sie andere Flüssigkeiten verwenden möchten, fragen Sie bitte unseren technischen Dienst.

\*\* NI: Normale Liter  
Volumen bei atmosphärischem Druck

**Dimensioni**

La valvola a membrana VM è disponibile nelle seguenti versioni, i cui attacchi sono in accordo con le seguenti norme:  
**Incollaggio PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Incollaggio PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Saldatura nel bicchiere PP-H:**  
EN ISO 15494  
**Saldatura nel bicchiere PVDF:**  
EN ISO 10931  
**Filettatura:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Flangiatura:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

**Dimensions**

The VM diaphragm valve is available in the following versions, whose coupling comply with the following standards:  
**Solvent welding PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Solvent welding PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Socket fusion PP-H:**  
EN ISO 15494  
**Socket fusion PVDF:**  
EN ISO 10931  
**Threaded coupling:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Flanged couplings:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

**Dimensions**

La vanne à membrane VM est disponible dans les suivantes versions, dont les embouts sont conformes aux normes suivantes  
**Encollage PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Encollage PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Soudure par fusion PP-H:**  
EN ISO 15494  
**Soudure par fusion PVDF:**  
EN ISO 10931  
**Filetage:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Brides:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

**Dimensionen**

Die VM Membraneventile entsprechen mit ihren Anschlußmöglichkeiten folgenden Normen:  
**Klebeanschluß PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Klebeanschluß PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Schweißanschluß PP-H:**  
EN ISO 15494  
**Schweißanschluß PVDF:**  
EN ISO 10931  
**Gewindeverbindung:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Flanschanschluss:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

Tableaux concernants le PVC-U

Tabellen gültig für PVC-U

## Installazione sull'impianto

- 1) La valvola può essere installata in qualsiasi posizione e direzione. Nelle giunzioni per incollaggio prestare la massima attenzione affinché il collante non penetri nella valvola stessa.
- 2) Collegare l'attuatore con un sistema di pilotaggio appropriato. Controllare che la pressione del fluido di comando e di esercizio sia conforme alle specifiche.
- 3) Pressioni di esercizio esageratamente elevate riducono la durata della membrana di comando (usare riduttori di pressione). Tempi di apertura lenti ne migliorano invece la durata.
- 4) È consigliabile ancorare la valvola ad un punto fisso.

### Nota

Poichè la guarnizione a membrana è compressa tra corpo ed attuatore, bulloni del corpo valvola devono essere controllati e serrati, se necessario, prima dell'installazione. Per questa operazione fare riferimento al foglio istruzioni.

## Smontaggio

- 1) Intercettare il fluido a monte della valvola ed assicurarsi che non rimanga in pressione (scaricare a valle se necessario).
- 2) Rimuovere i tappi di protezione (12), svitare le viti (11) per separare il corpo (9) dal gruppo attuatore (1). Questa operazione risulta più agevole se effettuata con attuatore in pressione.
- 3) Svitare la membrana di tenuta (8) e rimuovere l'otturatore (6).

## Connection to the system

- 1) The valve can be installed in any position and direction. When installing the valve by solvent welding take extreme care to ensure that the solvent does not run into the valve body.
- 2) Connect the actuator with a suitable pilot System. Check that both working and control pressure are in accordance with the specifications.
- 3) Unnecessary high pressure shorten control diaphragm's life (use pressure reducers). Slow opening times make it longer.
- 4) To fix the valve body to a steady point is recommended.

### Note

As the diaphragm is compressed between body and actuator, the bolts of the valve body should be checked and tightened, if necessary, before the installation. For this operation please read the instruction sheet.

## Disassembly

- 1) Intercept the conveyed fluid upstream the valve and ensure that it is not under pressure (vent downstream if necessary).
- 2) Remove the protecting plugs (12), unscrew the bolts (11) to separate the body (9) from the actuator group (1). This operation will be easier with air pressure into the actuator.
- 3) Unscrew the diaphragm (8) and remove the loose compressor (6).

## Montage sur l'installation

- 1) Le robinet peut être installé dans n'importe quelle position. Lorsque le raccordement est effectué par collage il faut veiller à ce que le collant ne coule pas à l'intérieur du corps, compromettant l'étanchéité.
- 2) Connecter l'actionneur avec un système de pilotage approprié. Contrôler que les pressions du fluide de commande et d'exercice soient conformes aux spécifications.
- 3) Des pressions d'exercice exagérément élevées réduisent beaucoup la vie de la membrane. Des temps d'ouverture lents assurent une durée prolongée.
- 4) Il est conseillé d'ancrer la vanne à un point fixe.

### Note

Avant l'installation c'est nécessaire de vérifier et, si nécessaire, de bien serrer les boulons car la membrane est comprimée entre le corps et la tête.  
Pour cette opération, lisez la fiche d'instructions.

## Démontage

- 1) Arrêtez le fluide en amont du robinet et s'assurer qu'il ne soit plus sous pression (si nécessaire décharger en aval).
- 2) Enlever les bouchons (12), dévisser les vis (11) et séparer le corps (9) du groupe actionneur (1). Cette opération sera plus facile en présence d'air dans l'actionneur.
- 3) Dévisser la membrane (8) et enlever l'obturateur (6).

## Einbau in eine Leitung

- 1) Das Ventil kann unabhängig von Lage und Durchflußrichtung eingebaut werden. Bei Klebeanschlüssen ist unbedingt darauf zu achten, daß kein Klebstoff in das Ventilgehäuse hineinläuft.
- 2) Der Antrieb ist mit einem passenden Pilot-Ventil zu versehen. Es ist zu überprüfen, daß Betriebsdruck und Steuerdruck den Angaben unter "Technische Daten" entsprechen.
- 3) Unnötig hohe Steuerdrücke verkürzen die Lebensdauer der Steuermembrane (Druckmindestventil!). Langsame Öffnungszeiten verbessern die Lebens-dauer.
- 4) Eine Befestigung des Ventils ist zu empfehlen.

### Merke

Da sich Dichtungen im Laufe der Zeit setzen, sollten vor Inbetriebnahme der Ventile Schrauben und Muttern körperseitig auf festen Sitz überprüft und gegebenenfalls nachgezogen werden. Für diesen Vorgang lesen Sie bitte die Anleitung.

## Demontage

- 1) Die Leitung ist an geeigneter Stelle drucklos zu machen und zu entleeren.
- 2) Schutzkappen (12) wegnehmen und die Schrauben (11) abschrauben, um den Körper (9) von dem Antrieb zu entfernen. Diese Operation wird erleichtert, wenn das Ventil mit Steuerluft geöffnet wird.
- 3) Membrane abschrauben (8) und Druckstück (6) entfernen.

## Montaggio

- 1) Inserire l'otturatore (6) sullo stelo dell'attuatore (1).
- 2) Avvitare la membrana (8) sullo stelo, attraverso l'otturatore (6), in senso orario fino a quando non si incontra resistenza. Quindi svitare la membrana in senso antiorario fino al suo allineamento con i fori dei bulloni.
- 3) Posizionare il gruppo attuatore sul corpo valvola (9) ed avvitare le viti (11). Questa operazione sarà più facile con attuatore in pressione.
- 4) Quindi togliere pressione e stringere le viti (11) con una chiave dinamometrica, applicando le coppie raccomandate nel foglio istruzioni.
- 5) Coprire quindi le viti con i tappi di protezione (12).

### Attenzione

Tutte le operazioni su apparecchiature in pressione, o contenenti molle compresse, devono essere effettuate in condizioni di sicurezza per l'operatore.

## Assembly

- 1) Put the compressor (6) on the actuator spindle (1).
- 2) Screw the diaphragm (8) clockwise in the valve spindle via the compressor (6) until resistant is felt upon which the diaphragm should be screwed anti-clockwise until alignment with the bolt hole centres is achieved. Open the actuator with air pressure.
- 3) Put the actuator group on the body (9) and screw in the bolts (11).
- 4) Then exhaust the air pressure and tighten the bolts (11), by mean of a torque meter wrench, and applying the torques recommended in the instructions sheet.
- 5) Then cover the bolts with the protection caps (12).

### Warning

All the activities with pressurized equipments, or including compressed springs, must be undertaken in safety conditions for the operators.

## Montage

- 1) Positioner l'obturateur (6) sur la bague de l'actionneur (1).
- 2) Visser la membrane (8) sur la tige de manœuvre, à travers l'obturateur (6), dans le sens horaire jusqu'à rencontrer résistance; ensuite dévisser la membrane jusqu'à la correspondance des trous de la membrane de commande avec les trous de l'actionneur.
- 3) Positioner le groupe actionneur sur le corps (9) et placer les vis (11). Cette opération sera plus facile en présence d'air dans l'actionneur.
- 4) Enlever ensuite la pression d'air et serrer les vis (11), avec une clef dynamométrique, en appliquant les couples de serrage indiqués sur la notice d'instruction.
- 5) Placer les bouchons de protection (12).

### Attention

Toute opération sur les appareils en pression, ou réglés par des ressorts comprimés, doit être effectuée en état de sécurité du personnel.

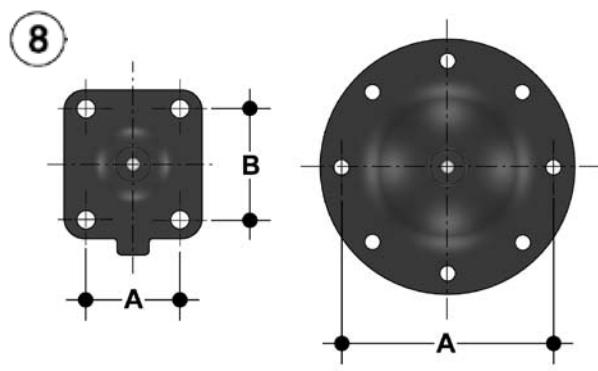

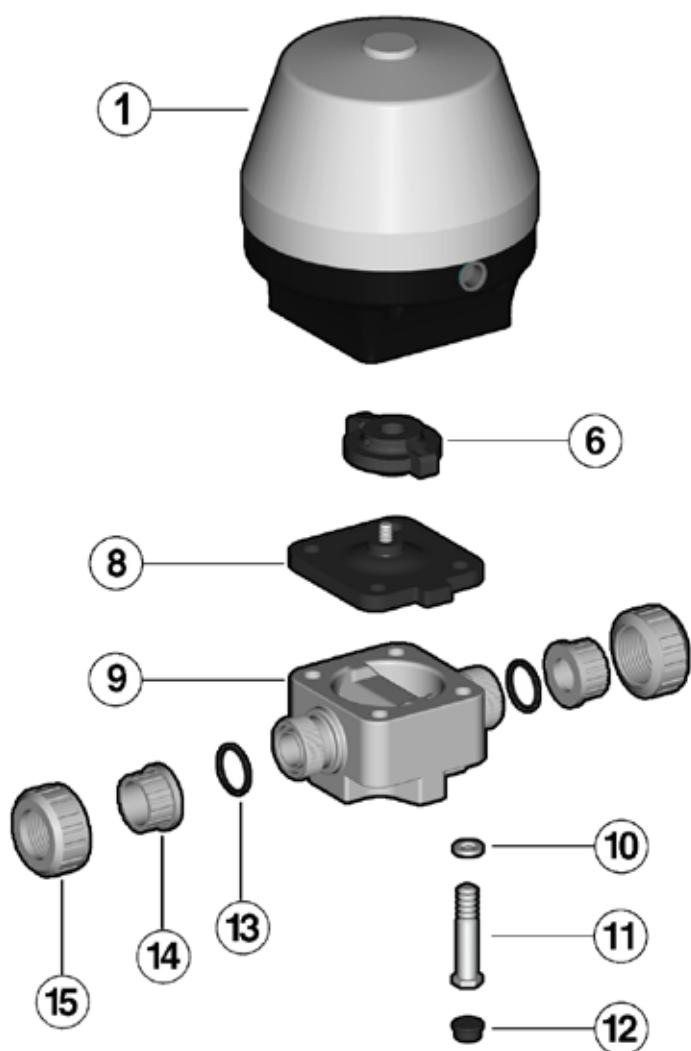

## Montage

- 1) Setzen Sie den Kompressor (6) an der Ventilspindel (1).
- 2) Die Membrane (8) ist in der Ventilspindel durch den Kompressor (6) im Uhrzeigersinn zu schrauben, bis Resistenz zu spüren ist. Jetzt ist die Membrane gegen den Uhrzeigersinn abzuschrauben um die Membrane mit den Löchern der Schrauben zu zentrieren. Öffnen Sie den Antrieb mit Druckluft (NC).
- 3) Der Antrieb auf dem Körper (9) legen und die Schrauben (11) mit den Muttern (26) ziehen. Diese Operation wird erleichtert, wenn das Ventil mit Steuerluft geöffnet wird. 4) Luftdruck ausströmen und die Schrauben (11) mit einer Drehmomentenschlüssel mit den in der Gebrauchsanweisung empfohlenen Werte festziehen.
- 5) Dann decken Sie die Schrauben mit den Schutzkappen (12).

### Warnung

Alle Tätigkeiten mit druckbeaufschlagten Geräten inklusiv vorgespannter Federn, dürfen nur unter Voraussetzung von entsprechenden Sicherheitsbedingungen für das Personal durchgeführt werden.

## Valvola a membrana a comando pneumatico, NO - DA

La VM/NO - DA è una valvola dotata di un attuatore a membrana a semplice effetto normalmente aperto o doppio effetto che non richiede manutenzione.

Il vantaggio della valvola a membrana rispetto ad altri sistemi è la semplicità di funzionamento, unitamente al design compatto.

Può venire installata in qualsiasi posizione e può essere impiegata con fluidi liquidi o gassosi; inoltre è particolarmente adatta per fluidi abrasivi o contenenti impurità.

Con questo tipo di valvola vengono ridotti al minimo i rischi di colpo d'ariete. L'innovativo sistema di tenuta CDSA - Circular Diaphragm Sealing Area - utilizzato fino al DN50, offre, inoltre, i seguenti vantaggi:

- distribuzione uniforme della pressione dell'otturatore sulla membrana di tenuta
- diminuzione fino al 20% della coppia di serraggio delle viti che fissano il corpo valvola all'attuatore
- minore stress meccanico per tutti i componenti della valvola
- facilità di pulizia delle zone interne della valvola
- minimizzazione del rischio di accumulo di depositi, contaminazione o danneggiamento della membrana a causa di fenomeni di cristallizzazione
- riduzione della coppia di manovra fino al 40%

La speciale membrana in fibra tessile dell'attuatore, permette di aprire/chiudere fino a  $10^6$  volte senza mostrare segni di usura.

### PECULIARITÀ

- gamma dimensionale da DN 15 mm a DN 100 mm
- costruzione robusta con attuatore adatto ad ambienti chimicamente aggressivi
- possibilità di allineare sul medesimo asse di centro tubo tutti i corpi valvola dal DN 15 al DN 50
- sospensione flottante della membrana, per evitare carichi concentrati ed aumentarne la tenuta e la durata
- tenuta superiore membrana completamente circolare (CDSA).

### ACCESSORI

- limitatore di corsa
- limitatore di corsa con indicatore visivo di posizione
- limitatore di corsa con indicatore di posizione e comando manuale di emergenza
- indicatore visivo di posizione
- microinterruttori di fine corsa
- posizionatore elettropneumatico
- elettrovalvola pilota 3/2 vie per montaggio diretto o in batteria.

Per maggiori informazioni visitare il sito: [www.fipnet.it](http://www.fipnet.it).

## Pneumatically actuated diaphragm valve, NO - DA

The diaphragm valve type VM/NO - DA is equipped with a maintenance free single acting normally open or double acting actuator, diaphragm type.

The advantage of the diaphragm valves, against other types of valves, consists of simplicity in function and compact design.

The diaphragm valve can be installed in any position and it can be used with liquid and gaseous fluids, and is particularly suitable for dirty or abrasive media.

Water hammer risk is reduced with this valve.

The innovative CDSA - Circular Diaphragm Sealing Area - system (up to DN50) offers the following mechanical advantages:

- uniform distribution of the pressure made by the compressor on the sealing diaphragm
- up to 20% of bolt tightening torque reduction
- reduced mechanical stress on all valve components
- easy internal cleaning
- lower risk of deposit accumulation, fluid contamination and damaging of the diaphragm due to the eventual crystallization
- reduction of the closing handwheel torque of the manual valves up to 40%

The flat, cloth reinforced, neoprene control diaphragm shows little wear and tear after  $10^6$  duty cycles.

### CHARACTERISTICS

- size range from DN 15 mm up to DN 100 mm
- rugged construction with actuator suitable for use in chemically aggressive environments
- possible alignment of all valve bodies DN15÷50 at the same height from the ground
- floating diaphragm suspension, to prevent point loading in the diaphragm center, for better sealing and endurance
- fully circular top diaphragm sealing (CDSA).

### ACCESSORIES

- stroke limiter
- stroke limiter with optical Position indicator
- stroke limiter with optical Position indicator and emergency manual override
- optical position indicator
- limit-switches box
- electro pneumatic positioner
- direct or gang mounting 3/2 way pilot solenoid valve.

For more information please visit our website: [www.fipnet.it](http://www.fipnet.it).

## Vanne à membrane à commande pneumatique, NO - DA

La vanne à membrane type VM/NO - DA est équipée d'un actionneur pneumatique normallement ouvert ou double effet qui ne nécessite pas d'entretien. L'avantage du robinet à membrane, en comparaison avec d'autres types de robinets, réside dans sa simplicité de fonctionnement et sa conception compacte.

Ce robinet est principalement utilisé pour éviter les problèmes de contamination ou pour le transport de fluides abrasifs.

Il peut être installé dans n'importe quelle position et réduit le risque de "coup de bâlier".

Le nouveau système CDSA - Circular Diaphragm Sealing Area - utilisé jusqu'au DN50, offre les avantages suivantes:

- distribution uniforme de la pression du compresseur sur la membrane.
- réduction jusqu'au 20% de la couple de serrage des écrous qui fixent le corps de la vanne à son actuateur
- réduit stress mécanique pour tous les composants de la vanne
- simple nettoyage des parties internes du corps de la vanne
- réduction du risque d'accumulation de dépôts, de contamination où de causer des dégâts à la membrane par cristallisation
- réduction de la couple de serrage jusqu'au 40%

L'actionneur peut fonctionner jusqu'à  $10^6$  cycles sans montrer aucune usure considérable.

### CARACTERISTIQUES

- gamme dimensionnelle de DN 15 mm à DN 100 mm
- construction robuste avec actionneur qui peut être utilisé dans environnements chimiquement agressifs
- alignement possible des axes (DN 15-50)
- suspension flottante de la membrane évitant une charge concentrée sur le centre de la membrane, pour une meilleure étanchéité et durée de vie
- étanchéité supérieure de la membrane complètement circulaire (CDSA).

### ACCESOIRES

- limiteur de course
- limiteur de course avec indicateur de position
- limiteur de course avec indicateur de position et commande manuelle de secours
- indicateur de position
- boîtier avec 2 contacts de fin course
- positionneur electropneumatique
- électrovanne de commande 3/2. Montage direct ou en batterie.

Pour avoir d'autres informations, visiter le site: [www.fipnet.it](http://www.fipnet.it).

## Pneumatischem gesteuertes Membranventil, NO - DA Typ 285

Das Ventil ist durch Federkraft normal geöffnet und doppelwirkend (NO - DA) und wird durch das Steuermedium geschlossen.

Der glattflächige Antrieb ist wartungsfrei und kann mit neutralen, flüssigen und gasförmigen Steuermedien betrieben werden. Die gewebeverstärkte Steuermembrane ist außen gefasst und für eine hohe Schaltspielzahl ausgelegt.

Das Membranventil wird vorzugsweise für flüssige Medien eingesetzt, die aggressiv, abrasiv, verschmutzt oder breiig bis pastös sein können.

Das innovative CDSA-Design - Kreisrundes Membran Dichtsystem (bis DN 50) bietet folgende mechanischen Vorteile:

- Optimale Druckverteilung über das Druckstück auf die abdichtende Membran
- bis zu 20% Reduzierung der Anzugsdrehmomente
- geringere Belastung aller Ventilkomponenten (Antrieb, Ventilkörper und Dichtmembran)
- einfache und effiziente interne Reinigung
- deutlich geringeres Risiko der Ansammlung von Feststoffen und Auskristallisationen, dadurch werden Rekontaminationen und Beschädigung der Membrane reduziert
- Reduzierung der notwendigen Schließkräfte bei handbetätigten Ventilen um bis zu 40%

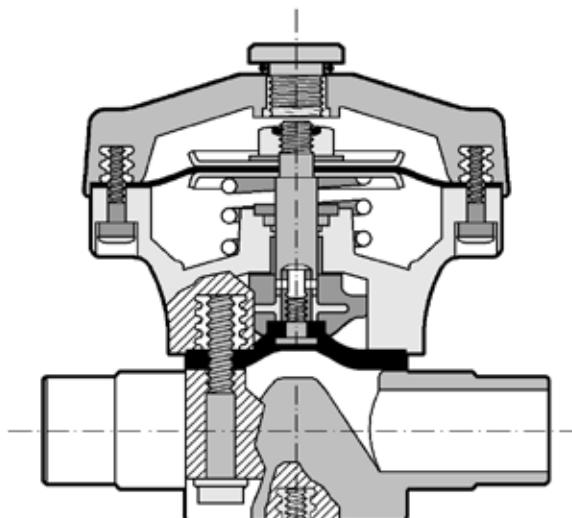

### HAUPTMERKMALE

- Größen von DN 15 mm bis DN 100 mm
- robuste Bauform mit Antriebmaterial geeignet für aggressive Atmosphäre
- Mittelachsen der Ventilkörper können auf dasselbe Niveau gebracht werden (DN15-50)
- flexible Membranaufhängung um punktuelle Anpressung der Mediumsmembrane zu vermeiden
- Konstruktiv bedingte kreisrunde und damit gleichmäßige Membranklemmung (CDSA).

### ZUBEHÖR

- Hubbegrenzung
- Hubbegrenzung mit optischer Stellungsanzeige
- Hubbegrenzung mit optischer Stellungsanzeige und Handnothandbetätigung
- optischer Stellungsanzeige
- elektromechanische oder elektronische (berührungslose) Stellungsanzeige
- Elektropneumatischer Stellungsregler
- angebauten 3/2 Wege Pilotventil der Baureihe 600 / 605

**Dimensioni**

La valvola a membrana VM è disponibile nelle seguenti versioni, i cui attacchi sono in accordo con le seguenti norme:  
**Incollaggio PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Incollaggio PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Saldatura nel bicchiere PP-H:**  
EN ISO 15494  
**Saldatura nel bicchiere PVDF:**  
EN ISO 10931  
**Filettatura:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Flangiatura:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

**Dimensions**

The VM diaphragm valve is available in the following versions, whose coupling comply with the following standards:  
**Solvent welding PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Solvent welding PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Socket fusion PP-H:**  
EN ISO 15494  
**Socket fusion PVDF:**  
EN ISO 10931  
**Threaded coupling:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Flanged couplings:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

**Dimensions**

La vanne à membrane VM est disponible dans les suivantes versions, dont les embouts sont conformes aux normes suivantes  
**Encollage PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Encollage PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Soudure par fusion PP-H:**  
EN ISO 15494  
**Soudure par fusion PVDF:**  
EN ISO 10931  
**Filetage:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Brides:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

**Dimensionen**

Die VM Membranventile entsprechen mit ihren Anschlußmöglichkeiten folgenden Normen:  
**Klebeanschluß PVC-U:**  
EN ISO 1452, EN ISO 15493,  
ISO 727, DIN 8062, DIN 8063,  
ASTM D2467, BS 4346-1,  
ISO 727-2  
**Klebeanschluß PVC-C:**  
EN ISO 15493, ISO 727-1,  
ASTM F439  
**Schweißanschluß PP-H:**  
EN ISO 15494  
**Schweißanschluß PVDF:**  
EN ISO 10931  
**Gewindeverbindung:**  
ISO 228-1, DIN 2999, ISO 7-1,  
BS 21, BS 10226  
**Flanschanschluss:**  
EN ISO 1092-1, EN ISO 1452,  
EN ISO 15493, EN 558, ISO 7005-1,  
ASTM ANSI B16.5 CL 150.

Tabella relativa al PVC-U

Tables relevant to PVC-U

Tableaux concernants le PVC-U

Tabellen gültig für PVC-U

## Installazione sull'impianto

- 1) La valvola può essere installata in qualsiasi posizione e direzione. Nelle giunzioni per incollaggio prestare la massima attenzione affinché il collante non penetri nella valvola stessa.
- 2) Collegare l'attuatore con un sistema di pilotaggio appropriato. Controllare che la pressione del fluido di comando e di esercizio sia conforme alle specifiche.
- 3) Pressioni di esercizio esageratamente elevate riducono la durata della membrana di comando (usare riduttori di pressione). Tempi di apertura lenti ne migliorano invece la durata.
- 4) È consigliabile ancorare la valvola ad un punto fisso.

### Nota

Poichè la guarnizione a membrana è compressa tra corpo ed attuatore, bulloni del corpo valvola devono essere controllati e serrati, se necessario, prima dell'installazione. Per questa operazione fare riferimento al foglio istruzioni.

## Smontaggio

- 1) Intercettare il fluido a monte della valvola ed assicurarsi che non rimanga in pressione (scaricare a valle se necessario).
- 2) Rimuovere i tappi di protezione (12), svitare le viti (11) per separare il corpo (9) dal gruppo attuatore (1).
- 3) Svitare la membrana di tenuta (8) e rimuovere l'otturatore (6).

## Connection to the system

- 1) The valve can be installed in any position and direction. When installing the valve by solvent welding take extreme care to ensure that the solvent does not run into the valve body.
- 2) Connect the actuator with a suitable pilot System. Check that both working and control pressure are in accordance with the specifications.
- 3) Unnecessary high pressure shorten control diaphragm's life (use pressure reducers). Slow opening times make it longer.
- 4) To fix the valve body to a steady point is recommended.

### Note

As the diaphragm is compressed between body and actuator, the bolts of the valve body should be checked and tightened, if necessary, before the installation. For this operation read the instruction sheet.

## Disassembly

- 1) Intercept the conveyed fluid upstream the valve and ensure that it is not under pressure (vent downstream if necessary).
- 2) Remove the protecting plugs (12), unscrew the bolts (11) to separate the body (9) from the actuator group (1).
- 3) Unscrew the diaphragm (8) and remove the loose compressor (6).

## Montage sur l'installation

- 1) Le robinet peut être installé dans n'importe quelle position. Lorsque le raccordement est effectué par collage il faut veiller à ce que le collant ne coule pas à l'intérieur du corps, compromettant l'étanchéité.
- 2) Connecter l'actionneur avec un système de pilotage approprié. Contrôler que les pressions du fluide de commande et d'exercice soient conformes aux spécifications.
- 3) Des pressions d'exercice exagérément élevées réduisent beaucoup la vie de la membrane. Des temps d'ouverture lents assurent une durée prolongée.
- 4) Il est conseillé d'ancrer la vanne à un point fixe.

### Note

Avant l'installation c'est nécessaire de vérifier et, si nécessaire, de bien serrer les boulons car la membrane est comprimée entre le corps et la tête.  
Pour cette opération, lisez la fiche d'instructions.

## Démontage

- 1) Arrêtez le fluide en amont du robinet et s'assurer qu'il ne soit plus sous pression (si nécessaire décharger en aval).
- 2) Enlever les bouchons (12), dévisser les vis (11) et séparer le corps (9) du groupe actionneur (1).
- 3) Dévisser la membrane (8) et enlever l'obturateur (6).

## Einbau in eine Leitung

- 1) Das Ventil kann unabhängig von Lage und Durchflußrichtung eingebaut werden. Bei Klebeanschlüssen ist unbedingt darauf zu achten, daß kein Klebstoff in das Ventilgehäuse hineinläuft.
- 2) Der Antrieb ist mit einem passenden Pilot-Ventil zu versehen. Es ist zu überprüfen, daß Betriebsdruck und Steuerdruck den Angaben unter "Technische Daten" entsprechen.
- 3) Unnötig hohe Steuerdrücke verkürzen die Lebensdauer der Steuermembrane (Druckmindestventil!). Langsame Öffnungszeiten verbessern die Lebens-dauer.
- 4) Eine Befestigung des Ventils ist zu empfehlen.

### Merk

Da sich Membranen im Laufe der Zeit setzen, sollten vor Inbetriebnahme der Ventile Schrauben und Muttern körperseitig auf fasten Sitz überprüft und gegebenenfalls nachgezogen werden. Für diesen Vorgang lesen Sie bitte die Anleitung.

## Demontage

- 1) Die Leitung ist an geeigneter Stelle drucklos zu machen und zu entleeren.
- 2) Zur Trennung des Antriebes vom Gehäuse (12), sind die Schutzkappen (11) zu entfernen und die Schrauben (9) zu lösen.
- 3) Membrane abschrauben (8) und Druckstück (6) entfernen.

## Montaggio

- 1) Inserire l'otturatore (6) sullo stelo dell'attuatore (1).
- 2) Avvitare la membrana (8) sullo stelo, attraverso l'otturatore (6), in senso orario fino a quando non si incontra resistenza. Quindi svitare la membrana in senso antiorario fino al suo allineamento con i fori dei bulloni.
- 3) Posizionare il gruppo attuatore (1) sul corpo valvola (9) ed avvitare le viti (11).
- 4) Stringere le viti (11) con una chiave dinamometrica, applicando le coppie raccomandate nel foglio istruzioni.
- 5) Coprire quindi le viti con i tappi di protezione (12).

## Assembly

- 1) Put the compressor (6) on the actuator spindle (1).
- 2) Screw the diaphragm (8) clockwise in the valve spindle via the compressor (6) until resistant is felt upon which the diaphragm should be screwed anti-clockwise until alignment with the bolt hole centres is achieved.
- 3) Put the actuator group (1) on the body (9) and screw in the bolts (11).
- 4) Tighten the bolts (11), by mean of a torque meter wrench, and applying the torques recommended in the instructions sheet.
- 5) Then cover the bolts with the protection caps (12).

## Montage

- 1) Positioner l'obturateur (6) sur la bague (1).
- 2) Visser la membrane (8) sur la tige de manœuvre, à travers l'obturateur (6), dans le sens horaire jusqu'à rencontrer résistance; ensuite dévisser la membrane jusqu'à la correspondance des trous de la membrane de commande avec les trous de l'actionneur.
- 3) Positioner le groupe actionneur (1) sur le corps (9) et placer les vis (11).
- 4) Serrer les vis (11), avec une clé dynamométrique, en appliquant les couples de serrage indiqués sur la notice d'instruction.
- 5) Placer les bouchons de protection (12).

## Montage

- 1) Setzen Sie den Kompressor (6) an der Ventilspindel (1).
- 2) Die Membrane (8) ist in der Ventilspindel durch den Kompressor (6) im Uhrzeigersinn zu schrauben, bis Resistenz zu spüren ist. Jetzt ist die Membrane gegen den Uhrzeigersinn abzuschrauben um die Membrane mit den Löchern der Schrauben zu zentrieren.
- 3) Der Antrieb auf dem Körper (1) legen und die Schrauben (9) mit den Muttern (11) ziehen.
- 4) Die Schrauben (11) mit einer Drehmomentenschlüssel mit den in der Gebrauchsanweisung empfohlenen Werte festziehen.
- 5) Dann decken Sie die Schrauben mit den Schutzkappen (12).

### Attenzione

Tutte le operazioni su apparecchiature in pressione, o contenenti molle compresse, devono essere effettuate in condizioni di sicurezza per l'operatore.

### Warning

All the activities with pressurized equipments, or including compressed springs, must be undertaken in safety conditions for the operators.

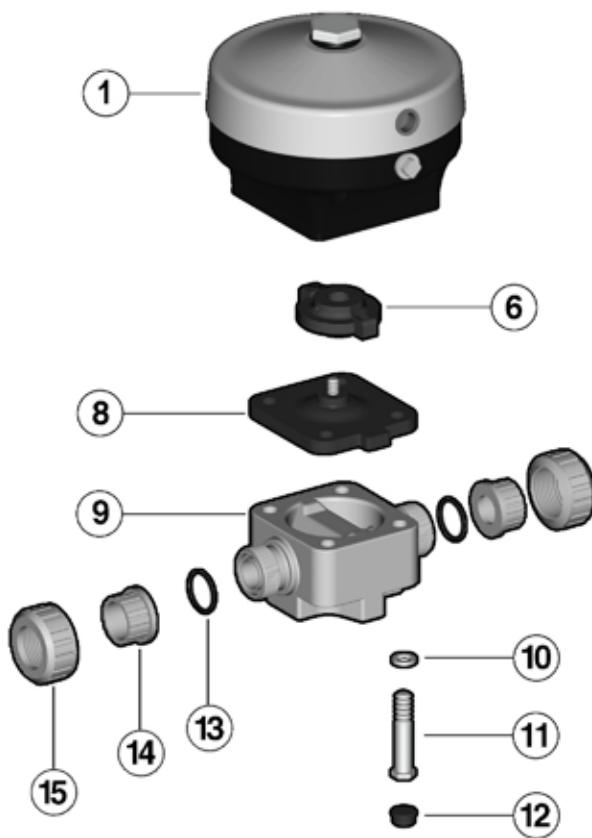

### Attention

Toute opération sur les appareils en pression, ou réglés par des ressorts comprimés, doit être effectuée en état de sécurité du personnel.

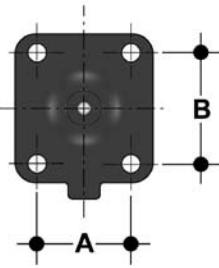

### Warnung

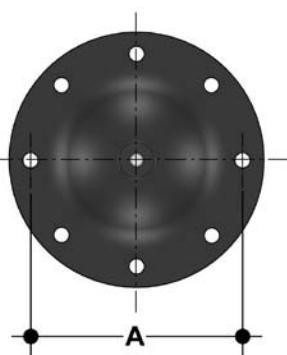

Alle Tätigkeiten mit druckbeaufschlagten Geräten inklusiv vorgespannter Federn, dürfen nur unter Voraussetzung von entsprechenden Sicherheitsbedingungen für das Personal durchgeführt werden.
